Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-9501

Comment on FR Doc # 2025-02305

Submitter Information

Name: Cody Pinkerton

General Comment

AI can be a powerful tool if used correctly, but it should not take the place of human creativity, which is what generative AI aims to do.

In an ideal future, we want AI to do our dishes or our laundry so that we have time write and create art even more, not the other way around.

Generative AI is also unethical, I believe. It is trained on images without their owners' consent, and can thus emulate art styles of artists without their consent either. What it does create, though, lacks any actual creativity. It lacks the passion, the soul, the thoughtfulness that artists put into their work. It's an insult to artists everywhere, honestly.

The arts are a vital part of society and exemplify what makes us human. They should not be replaced. Generative AI should be regulated if not outright banned. There should be no loopholes for its developers to exploit. They should focus on AI that is actually beneficial to society, like that which could help with national defense. Thank you.
