General Comment

"AI" doesn't deserve us, nor do we either need or want "AI."

I cannot abide by the notion that the "burdensome" copyright restriction must make exceptions for this so called "AI," exceptions that don't extend to the broader public. Nevermind the only thing that this "AI" has ever proven itself to ever be good for is duping normal people out of their time and/or money, letting the lazy cheat their way through qualifications, and just making stuff up to the uncritical among us.

If anything, "AI" ought to be throttled rather than given functionally official approval, as the data centers that power "AI" have been starving communities across this country (and the rest of the world) of their electricity and water, all for the sake of machines that cannot tell right from wrong.
