General Comment

AI, while it has its uses, objectively came into this world far too soon, and it's shakily climbed its way up using scraps, and all we have to stop it are shakily regulations which fools like Trump are trying to break down without realizing what they're going to do. While I personally have a curiosity of where this new technology may go, it's already ruining school systems and overtaking artists, which is all the more reason to stop tossing fuel into the fire and make companies responsible for the AI they have unleashed. Free use benefits the people, but in this case, it just benefits corporations.
