Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am a professional digital artist, animator, and content creator writing to express my deep concern for the direction of AI innovation and my strong belief that the US government must establish common sense laws and regulations around the creation, training, and use of AI technology. These requirements would not be "unnecessarily burdensome," as described by the National Science Foundation's listing.

The immense and wanton scraping of data, text, images, and videos used to train AI not only violates fair use, but is dangerous. Several news publications have reported that major AI companies like Stability AI Inc have trained their image generators on unauthorized material, including copyrighted material and even private medical images. This has prompted stock photo provider Getty Images to sue one such company, Stability AI Inc., according to a Reuters article titled "Getty Images lawsuit says Stability AI misused photos to train AI."

The Stanford Internet Observatory has even found, according to the Associated Press article titled "AI image-generators are being trained on explicit photos of children, a study shows," that thousands of child abuse material has made its way to AI database LAION, which was used to train Stable Diffusion.

It is morally imperative that transparency is enforced through federal legislation. Tech companies must create a system that categorizes and discloses their training material for legal and ethical purposes.

I understand the benefit of a strong tech industry in America. However, if AI companies are allowed to train their models without any restrictions whatsoever, with no heed to copyright laws or ethical standards whatsoever, there would be irreparable long-term damage to the many creative industries that are thriving in this country, and the immense talent pool behind it.

Thank you for your time.
