General Comment

Don't Let yourselves be tricked by AI the same way people were tricked by cryptocurrency and NFT's. The investments in AI are purely based on speculation, and inevitably like any other bubble, it is going to pop sooner or later. No one actually benefits from loosening regulations on AI. It hurts artists who make actually creative works that this regulation is trying to make it easier to steal. This is a complete and total dismantling of copyright law, allowing companies to steal millions of artists' hard work with no possibility of repercussions, and no recourse for the artists who had their works stolen. And for what? No one likes AI. AI images look terrible, and lack any of the meaning that makes real art special. AI leads to massive layoffs across many industries, with little to no new jobs to replace them. AI chatbots are unreliable, and have in the past told people to eat rocks, or to smoke while pregnant. If we can't trust AI to even give simple answers accurately, we most certainly should not be trying to trust it with the future of our country.
