## General Comment

Hello and good evening,

My name is Jacob Bauch, a student at the University of Montana and I'm commenting today with some concerns about generative AI. I'm not the most eloquent so I'll try to be brief at least for the sake of anyone reading this.

Generative AI can be very useful in my field in my studies, information technology, but I have some concerns about how its training data is collected, and how available generative AI has been to the public in general.

My main concern is about the livelihoods of self-employed artists and musicians, as well as small businesses focusing on commercial graphic design and production. It's increasingly hard to today to survive and keep clients in art production as with an iconic style it becomes easier for art to be reproduced. And rather than just straight copying intellectual property, a criminal can instead instruct generative AI to violate copyright after getting around some simple protections and pass off this imitation art as created by the original artist/company. My hope with this is that either copyrighted work wouldn't be able to used as training material at all without explicit consent. Failing that I think it would be good if the original artist received some sort of licensing fee, and that illicit AI generated content would have some sort of disclaimer to prevent it from being confused with the original artist(s) or being mistaken as having copyright protection like a human created work would have.
