General Comment

AI technologies like those created by Sam Altman and Open AI prey on the American people and their livelihoods by stealing intellectually owned property and profiting off of it.

The data centers that have been created by companies like Open AI and others have ruined the living conditions in the small towns they are placed in, driving up the usage of power in the given area, and polluting the area with fossil fuels used in generators just the keep the data centers running at capacity.

There has been a net LOSS from these companies as they have proven they are not profitable in the slightest.

Giving them the ability to steal from the public to train their models, which have not improved at the rate they promised, will not make them profitable and sustainable overnight. It's a grift against the American public and will NOT stand for it.
