General Comment

The theft of copyrighted materials by AI cannot happen. It threatens the livelihood of creatives and constitutes the illegal theft of written materials and other intellectual property. It is patently absurd that the government would even consider AI trained on copyrighted materials to be a lawful, valid, or even desirable thing.

There is a race to control data and bilk the public of every last dime. And AI is at the forefront.

Generative AI is useless, the end product is bad, and the environmental costs are clearly not worth it.

AI is the tech industry's last gasp at attempting to stay relevant and offer a product. AI isn't going to save anyone or anything. It's a useless, soulless distraction of no import or utility.
