## General Comment

Copyright is a fundamental way by which creators can profit from and protect their work. The United States has repeatedly sought to extend copyright terms in recognition of its importance. Allowing any company to steal copyrighted work for any purpose is and should be illegal. If a company cannot produce their product without theft, then by definition they are thieves, whether they are stealing goods or intellectual property. If AI is such a boundless source of wealth and product, then it should be easy for AI companies to pay creators for the use of works they have already stolen, and pay for the use of works in the future.

Again, no supposed "innovation" is worth creating a backdoor for copyright protections. They are important and lengthy because they are important. They incentivize creativity and innovation, unlike AI products which incentivize idiocy.
