General Comment

Generative large learning models (LLMs) require regulation to prevent infringement on copyright and other intellectual property issues. Current LLM implementations are intellectually fraudulent and steal works from human creators. This must be prevented if regulations are created.

Further, training LLMs on public internet forums has resulted in seeding the LLMs with the worst of America's thoughts - misogyny, racism, casual offensive language and disregard for other people. Reddit and Twitter are simply not good training inputs.

Regulation against using LLMs to generate misleading content is also critically important.
