Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

Hello, my name is Aisling Buddell. I am an artist, and have been in the industry for decades at this point. While my health ensures I'm unable to run a full time business, I occasionally supplement the income of myself and my husband with my art.

I won't mince words, "AI" systems made by large tech companies like Microsoft and Google are built on theft. Theft of the work of thousands of artists, both visual and written. Not only is it deeply unethical, this theft is a violation. The owners of these systems would have you believe that you should turn a blind eye - that what they do isn't a crime. But the fact that it isn't specifically called out as a crime in law yet doesn't make it not a crime.

Further, these companies will crush small American businesses with the promise of unbelievably low prices, all while delivering vastly inferior goods with their hallucinatory algorithms.

These systems can only be produced by training the models on works made by *people*. If they wanted our work, they should have commissioned us for it - and taken no for an answer if we said as much. Instead they steal it, siphoning off parts of our artistic souls to feed their machine; without compensation or recognition, and then sell it back to those who would have been our clients - which cuts us out of the market by directly competing with us.

This was already an existentially horrifying thing - but now these thieves would ask the administration to make this legal? The entitlement is baffling - they seem to believe that everything around them should be theirs for the taking. If the same people walked in to an artist's shop and started taking paintings away without paying for them, would you allow them to call it legal?

This is as baffling as it is revolting. American copyright law is intended to protect incentives to create and innovate - yet this law will make myself and others be wary of ever sharing our art again. This will stifle innovation, economic opportunity, and even community.

If you want to protect American innovation, protect American creators - not thieves.

I am not anti-AI necessarily, there are great opportunities (especially in the medical imaging field!) for AI algorithms to be used. However, people must come first - and right now that isn't happening. It will only get worse with a blank permission slip from the government.

Thank you for your generous time,
Aisling Buddell
