General Comment

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

I am a freelance writer that makes a living by bringing the ideas of others to life. There are endless individuals out there that lack the time or the skill to bring their ideas to the page, and I offer the chance for them to see what these ideas can become. This is a skill that I have honed for years, getting better and better over time, and investing my new learning in further experimentation so that I can become better still.

That is all the work that I have done, and the idea that generative AI, no matter the source, might be allowed to just bypass basic protections and use it, incompetently, for the purposes of others that are trying to save a few bucks is horrifying.

It is not just the fact that generative and other AI is genuinely harmful to the environment, nor is it the fact that AI is a cost-cutting, generally less-effective measure of generating either content or material. It is the fact that this use of AI deliberately and by design bypasses the people that have been the backbone of the creative industry for years, and in doing so, pushes out works that will inevitably outnumber the original creations that fed the AI to start with.

Because let's be clear. The only reason that this is happening is because AI has already feasted on everything that it legally – and illegally – could, and now, it wants more. Because it still isn't good enough, and it never will be, but Big Tech wants to pretend that it can so that they can rake in a few more dollars before the bubble pops.

For the sake of all creative types, artists, writers, and more, I beg you, do not carve out any exceptions for Big Tech, for AI, for anything. Copyright exists for a reason; this is not the reason to change it.

Thank you for your time.
