RE: The AI Trust Foundation's Comments on President Trump's National AI Plan Executive Order 14179

Dear Dr. Prabhakar,

On behalf of **The AI Trust Foundation for Beneficial AI**, thank you for the opportunity to share comments on the Trump Administration's Executive Order 14179—*Removing Barriers to American Leadership in Artificial Intelligence (AI)*. With the global AI market projected to reach \$15.7 trillion, strategic action now will sustain and grow America's global leadership in AI innovation, governance, and talent.

The AI Trust Foundation for Beneficial AI

Founded in 2023, The AI Trust Foundation is the leading independent organization dedicated to **accelerating AI's beneficial uses**. Under the leadership of Chair Emeritus California State Senator Jerry McNerney, Ph.D.—mathematician, former U.S. Congressman, and author of the landmark *AI in Government Act*—we are the only organization uniting AI innovators across the entire AI ecosystem to speed up the path to **real-world AI solutions which have a positive impact**.

The AI Trust Foundation collaborates with leaders across industries -- **healthcare, energy, national security, transportation, education**, and more – to accelerate AI solutions responsibly and effectively. Our **powerhouse alliance** includes RedCloud Technology, Box Inc, Microsoft, the Edison Foundation, the U.S.-Qatar Business Council (USQBC), the Cyber Readiness Institute, and a wide range of institutions developing **America's next generation of AI talent**.

Our Unique Platform

The AI Trust Foundation is a **unique platform** in the **\$15.7 trillion global AI market**, offering Members:

- **Exclusive opportunities** to showcase American AI technology
- **Unique partnerships with** AI pioneers, policymakers, academic innovators, and entrepreneurs, and
- **Useful market insights and access to shape policy** before regulations are written.

Beneficial AI: Shaping the Future for Good

The AI Trust Foundation is working to accelerate real-world AI solutions across industries:

- **Healthcare:** AI is enabling earlier disease detection, expediting drug discovery, powering precision medicine, and extending healthy lifespans.
- **Infrastructure:** From self-monitoring bridges to optimized traffic, AI is ushering in a more modern, resilient America.
- **Government Services:** AI is improving citizen services. From reducing patent backlogs to providing 24/7 digital assistance, AI can power a responsive and efficient public sector.
- **Energy:** Smart grid AI is stabilizing power supply, fusion breakthroughs are within reach, and predictive AI is enhancing climate resilience. Our sustainable energy future is now possible.
- **Agriculture:** AI and precision farming are sowing the seeds for a productive, profitable agricultural revolution.

To deliver AI's full benefits, public trust must be the priority and AI must be developed responsibly, with strong safeguards. Just as Madison and our Founding Fathers established enduring principles of constitutional governance, we need a framework where AI innovation flourishes within structured limits, reinforcing democratic values. With public trust, we can unlock AI's full benefits.

Our Strategic Recommendations for President Trump's National AI Plan

We propose three strategic initiatives for immediate collaboration with the Trump Administration to accelerate beneficial AI:

1. **Steer investment** in beneficial American AI technologies through an innovative SelectUSA Industry Partnership
2. **Develop American talent** through our National AI Talent Initiative
3. **Lead global governance** through our Global AI Principles

These three complementary pillars—investment, talent, and governance—form a comprehensive strategy to secure America's AI leadership, with our SelectUSA Industry Partnership serving as the economic engine to fuel innovation across the AI ecosystem.

1. Drive Investment in American AI Innovation

The AI Trust Foundation seeks designation as a **SelectUSA AI Industry Partner** to help America capture the \$15.7 trillion global AI market opportunity. Our partnership will:

- **Catalyze new AI investments in American AI** leveraging our strategic alliances, including our landmark MOU with the **U.S.-Qatar Business Council (USQBC)**,
- **Showcase American excellence** through our BETTY Awards for Beneficial, Technology, highlighting breakthrough innovations in healthcare, transportation, government, small business, and other industries, and
- **Support the Stargate Initiative** by strengthening critical AI infrastructure, bridging AI and energy ecosystems, and accelerating development of fusion and other clean technologies to secure America's computational advantage.

2. Build America's AI Professional Advantage

To maintain global leadership, the U.S. must develop world-class AI professionals. We invite the Administration to join our **National AI Talent Initiative**, coordinating scholarships, curricula, and apprenticeships to prepare Americans for AI careers:

- **Prepare** 100,000 AI-skilled professionals by 2027 through our network of 35+ educational, research, and cultural institutions, creating regional AI talent hubs,
- **Build** specialized AI career pathways connecting universities, community colleges, minority-serving institutions, and industry partners, and
- **Expand** our innovative "AI 101" training programs ensuring every American can access foundational AI knowledge and professional opportunities in this high-growth sector.

3. American Leadership in Global AI Governance

AI will only yield its full benefits if the public trusts these technologies. Inspired by **James Madison's vision of governance** which balanced **innovation with structured safeguards**, our **Global AI Principles** initiative presents a unique opportunity to assert U.S. leadership in shaping international AI norms and standards to ensure enduring democratic stability.

By working with allies across Europe, Japan, India, the Middle East, and other democracies, we can champion a *common framework for responsible AI* which strengthens alliances and technological partnerships. We recommend the Administration adopt the AI Trust Foundation's **Global AI Principles** as the foundation for international standards which:

- **Prevent overregulation** by balancing innovation with responsible safeguards through smart private-public partnerships and
- **Position the U.S.** as the global authority on AI governance.

Shaping The Future of AI for Good

The AI Trust Foundation stands ready as your strategic partner to advance American interests, values, and global leadership to:

- 1. Drive Investment in American AI Innovation** As a SelectUSA AI Industry Partner, we will catalyze investments in American AI, showcase excellence through our BETTY Awards, and support the Stargate Initiative to secure America's competitive advantage in the \$15.7 trillion global AI market.
- 2. Build America's AI Professional Advantage** Our National AI Talent Initiative will prepare 100,000 AI-skilled professionals by 2027, build specialized career pathways across educational institutions, and expand "AI 101" training programs to ensure all Americans can access opportunities in this high-growth sector.
- 3. Lead Global AI Governance** Drawing inspiration from Madison's constitutional vision, our Global AI Principles establish a framework balancing innovation with responsible safeguards, preventing overregulation while positioning the U.S. as the global authority on AI governance.

Together, these initiatives will advance America's interests, values, and global leadership in AI while creating unprecedented prosperity and opportunity for all Americans.

We look forward to working with you to shape the future of AI for good.

Respectfully submitted,

Elizabeth Vella Moeller

Appendix: The AI Trust Foundation's Global AI Principles

- **Global Leadership & Innovation** – The U.S. should lead in setting AI governance frameworks which promote responsible innovation.
- **Beneficial Uses** – AI should enhance human potential and dignity.
- **Safeguards & Security** – AI systems should be designed with safeguards to uphold privacy rights, adhere to cybersecurity standards, and include human oversight.
- **Transparency** – AI decision-making should be explainable and accountable.
- **Fairness** – AI should be impartial and promote equitable opportunities.
