To:

Office of Science and Technology Policy (OSTP),

Attn: Faisal D'Souza, NITRD National Coordination Office (NCO)

Response to Request for Information (RFI) on the Development of an Artificial Intelligence (AI) Action Plan in United States of America

Dear OSTP and NITRD NCO Team,

I value the chance and the opportunity to contribute to the development of the **AI Action Plan**, which was directed by Executive Order 14179, which President Donald Trump signed on January 23, 2025. For the future of the country, it is imperative that the United States maintain its leading position in AI while promoting economic competitiveness, innovation, and security. I have included a list of important targets and suggestions for the development of the U.S. AI Action Plan below.

1. Strengthening AI Infrastructure and Compute Resources

- **Invest in Domestic AI Hardware and Chips:** Building on the CHIPS and Science Act (2022), the United States should increase manufacturing investments in semiconductors to lessen dependency on overseas supply chains.
- **Energy-Efficient AI Systems:** To guarantee sustainable AI infrastructure, incentives for energy-efficient AI models and data centers should be offered.

Policy Actions:

- Increase domestic semiconductor production to lessen reliance on imported hardware and protect the AI supply chain.
- To guarantee sustainable AI growth, U.S should offer tax incentives or breaks and federal funds for AI data centers that use less energy.
- R&D expenditures for next-generation AI chips that are tuned for high-performance computation and energy efficiency should be increased.

Reference: CHIPS and Science Act (2022), Executive Order 14179 (2025)

2. Open-Source AI and Model Transparency

- **Government Support for Open AI Models:** By providing funding for the development of open-source AI, big businesses or companies will be prevented from monopolizing the market in the United States.

- **Assurance and Explainability:** AI systems ought to be comprehensible, especially in high-risk industries like healthcare, finance, and law.

Policy Actions:

- To encourage competition and openness, federal incentives for the development of open-source AI models should be established.
- Mandate explainability and fairness assessments for AI systems utilized in vital fields, such as law, healthcare, and finance.
- Standardized AI governance frameworks should be developed to guarantee responsible implementation in both the public and private sectors.

Reference: The White House AI Bill of Rights (2022), OECD AI Principles (2023)

3. AI Safety, Cybersecurity and National Security

- **Strengthen AI Security Against Adversarial Attacks:** AI models ought to be developed with defense against adversarial attacks and data poisoning.
- **Defense and National Security Applications:** To guarantee that AI technologies can fend off new cyberthreats, national security objectives should guide AI research.

Policy Actions:

- To defend against hostile attacks, model ingestion, and unauthorized data exfiltration, implement AI-specific cybersecurity guidelines into place.
- Develop national security applications powered by AI while making sure they adhere to moral AI standards.
A national AI security task force should be established to keep an eye on and address threats from hostile countries.

4. Protecting AI Intellectual Property and Addressing AI Distillation Concerns

According to recent allegations, High-Flyer's DeepSeek, a Chinese AI company, may have violated OpenAI's terms of service by reportedly using distillation techniques to unlawfully extract knowledge from OpenAI's models. In late 2024, OpenAI and Microsoft are looking into data exfiltration instances where OpenAI developer accounts, allegedly connected to DeepSeek, were used to turn OpenAI's output into rival models, according to Bloomberg and the Financial Times.

- **Strengthen AI IP Protections:** American AI companies need to be protected from intellectual property theft and illegal distillation. Stricter cybersecurity regulations should be in place to safeguard AI models from being exploited by overseas rivals.
- **Enforce AI Trade and Security Measures:** Strict penalties should be applied for infractions, and policies should be put in place to stop AI abuse through distillation and unapproved model training.

- **Promote International Cooperation:** To guarantee that AI trade regulations are implemented globally and to set standards for moral AI development, the United States should collaborate with allies.

Policy Actions:

- Strengthen legal protections against AI distillation to prevent intellectual property theft and unauthorized knowledge extraction.
- Implement stricter AI export controls to prevent unauthorized use of U.S. AI technologies by foreign adversaries.
- Enhance cybersecurity protocols for AI APIs and developer platforms to detect and prevent large-scale data exfiltration.

The Guardian - "OpenAI 'reviewing' allegations that its AI models were used to make DeepSeek"

5. Data Privacy and AI Ethics

- **Establish Robust Data Governance Frameworks:** Ensure that privacy rules are followed while training AI on data that has been ethically sourced.
- **Balanced Regulations:** AI policy should be balanced, protecting civil freedom without placing undue restrictions that hinder progress in the private sector.

Policy Actions:

- To safeguard user data while permitting responsible AI innovation, robust AI privacy legislation should be introduced.
- Demand that companies creating AI follow moral data sourcing guidelines to guarantee adherence to privacy regulations.
- Uses of AI-powered privacy-preserving strategies like differential privacy and federated learning.

Reference: General Data Protection Regulation (GDPR – EU), OECD AI Principles (2023)

6. AI Research and Workforce Development

- **Expand AI Education and Workforce Training:** Universities and technical colleges must receive more money for their AI education and research initiatives.
- **Attract Global AI Talent:** To be competitive, the US should make it easier for entrepreneurs and AI experts to obtain visas.

Policy Actions:

- To give workers and students the skills they need for AI-driven industries, expand AI education efforts.

- To spur innovation and preserve American leadership in AI, public funds should be made available for AI research at academic institutions.
- Simplify visa requirements for foreign AI researchers and business owners in order to attract top talent to the United States.

Reference: National AI Initiative Act (2020), U.S.-China AI Talent Competition

7. International AI Leadership and Competition

- **Establish Global AI Standards:** Along with allies, the United States should take the lead in establishing moral AI governance structures.
- **Balanced AI Export Controls:** To safeguard American interests without impeding cooperation, export restrictions pertaining to AI should be strategically implemented.

Policy Actions:

- To create international standards for AI governance, strengthen AI partnerships with democratic nations.
- Develop international trade agreements to keep authoritarian governments from abusing AI and to guarantee ethical AI development.
- Establish fair AI export regulations that safeguard American technology superiority without impeding constructive international cooperation.

Conclusion

The AI Action Plan offers a chance to position the United States at the leading edge of AI development while maintaining economic expansion and national security. Achieving this goal will require giving top priority **to open-source development, cybersecurity, privacy, workforce training, AI infrastructure, and global leadership.**

I appreciate the opportunity to contribute to this discussion and look forward to seeing the AI Action Plan finalized. Thank you for your time and consideration.

Sincerely,

Abdulganiyu Jimoh
