Good evening,

My name is Allysia Everson. I am a natural-born citizen of the United States.

I am a life-long artist and although I am not in the professional field, I have seen the negative effects that generative AI images have done to the Arts in both professional and amateur circles.

I took Graphic Design in high school for several years, from Summer 2008 to Spring 2010, and one of the first topics we learned in that class was regarding Copyright, copyright infringement, and the responsibility that we had as graphic designers, regardless of skill or professional level, to abide by the law.

Even back then, it was impressed upon students the importance of integrity in our art.

Images generated by the process of bot programs mass-scraping millions upon billions of other images without the consent of their owners is copyright infringement to the utmost degree.

I have seen countless artists lose customers and their entire livelihoods because businesses are turning to these unlawfully generated images in lieu of paying professionals.

I have seen the work of deceased artists whose families have cried out in horror as their loved ones' art--their living legacies--are unlawfully trained on the artwork of their loved ones to generate look-alikes and turn a profit.

Tech bros looking to save a quick buck will decry these points, saying that artists "riff" on other artworks all the time, and we have no place to criticize their programs that are also overutilizing internet resources and slowing down traffic of the internet nation-wide.

This is a sham. Generative AI programs are over bloated, overcostly, and nothing more than a Silicon Valley fad that has no place in the future of the US.

These so-called "Artificially Intelligent" programs are nothing more than glorified autocorrect programs committing copyright infringement on a scale never seen before that must be stopped at all costs.

It threatens the livelihoods of countless people, and threatens the very integrity of Copyright itself.
