Please listen and this is a serious post so thank you for reading this: the most important thing is developing an AI System that abides by the Fourth Amendment of the United States: Search and Seizure Regulated. I am very Pro-AI and I want it to be used to Enhance Human Privacy and Individual Freedoms, Rights, and Prosperity. I think that AI can be used ethically and is very useful in certain applications and it should not be used for Mass Surveillance or Intelligence Gathering on Citizens by Big Tech or any Malicious Actors Because That would mean that it possibly could be Violating the 4th Amendment of Search and Seizure Regulated. I am sending this because I am all about AI for Prosperity and Freedom. I think that since the Snowden Revelation(s) have happened we should move forward and please don't repeat the same mistake of mass surveillance with Starshield and Stargate Projects Please. Not a criticism or judgement this is all just my opinion so thank you for allowing me the space to address this! Thank you so much God Bless America and Whoever is reading this just letting you know that this is a Real Person Not an AI Chatbot so thank you for taking the time for reading my comment!
