The United States has long stood at the pinnacle of technological advancement, and its leadership in the AI sector is a testament to this legacy. As the global vanguard of AI research, development, and deployment, the U.S. is uniquely positioned not only to shape the future of AI but also to shoulder the profound responsibility of ensuring that these transformative technologies are deployed ethically and with foresight. While the export of AI technologies holds immense promise—fueling economic progress, fostering international collaboration, and enhancing global competitiveness—it also presents significant risks. Among these, the most alarming is the potential for AI to be exploited for malicious or destructive purposes. The weaponization of AI—whether through autonomous weapons, deepfake technology, or AI-powered cyberattacks—poses an unprecedented threat to global peace, security, and stability. To confront these challenges head-on and mitigate the risks of AI misuse, the United States must take a bold step toward defining a comprehensive, transparent framework for the responsible exportation of AI technologies. I propose the creation of the United States AI Leadership Alliance & Impact Forum (USAIA-IF)—a bold, unified initiative designed to drive global AI innovation while ensuring ethical development, sustainable growth, and the protection of international security. This platform will enable the U.S. to collaborate with allied nations to establish binding global standards and regulations for AI, with an unwavering focus on safety, privacy, and preventing misuse. By leading this global effort, the U.S. will not only solidify its position as the foremost authority in AI but also ensure that AI technologies are deployed in ways that advance the greater good of humanity, safeguarding both global prosperity and peace. Regards, Swami Vijay Kumar Durai Global CEO, PRS International Group of Companies
