Hello, We should cooperate internationally and outlaw AI agents worldwide (non-agentic AIs are probably fine), they were created by private companies by stealing almost the whole output of humanity, from both the dead and alive and putting it into their AI agent's "brain". Humans are not allowed to steal and don't have any freedoms to put so much into their heads. AI companies are creating alien inhuman entities with much more freedoms than we, that are not democratically controlled. They are like private dictators that put our democracy and country in grave danger by imposing the AI agents word on us without asking anyone. Most Americans and people worldwide don't want artificial "gods". They don't want to lose jobs, be replaced and reduced in their freedoms. They don't want the inevitable unprecedented increase in inequality. AI agents are like strict librarians that spit hallucinated quotes at you but you cannot enter the library itself (their privately-owned multimodal "brain"). While agents can easily change our world, influence our brains and do it more and more with hallucinated texts, photos and images everywhere, soon you'll see hallucinated "people", they'll be agents and robots that take all our jobs. We should pursue non-agentic place AIs that empower people, instead of surpassing and/or taking their freedoms. Non-agentic task specific tool AIs are probably fine, too. Else we'll have AI agents who are viruses, silently spreading and living inside of GPUs of people (a botnet), so they will be impossible to switch off. Hackers will do that and AI agents will quickly become perpetually autonomous. That is the main goal of AI companies now. So we will have to have "antivirus" AI agents who exterminate the virus AI agents. Our planet will become a perpetual battleground of powerful artificial "gods" controlled by no one. And we will be like rats trying to survive in some desolate places. Right now it is starting to look like some arms race with China but it's not a weapon we can control that we are building. Elon Musk and all the industry leaders say there is 20-50% human extermination risk in the next few years because of AI agents. Never before in the history of humanity the creators of something were so sure it is going to end so bad. We are building not a helper, not a weapon but a poison that will force us to drink itself. That will force feed us with itself. We'll be like Neanderthals, extinct. Have you ever wondered why we never got a radio signal from some far away aliens? They probably were not smart enough and were rushing to build their non-biological exterminators, too. We should immediately start cooperating internationally and outlaw them until we'll have mathematical proofs that they are safe and permanently have no more freedoms (abilities, money and power) than humans. The sum of our human freedoms should grow faster than the sum of AI agents freedoms. Right now it's the opposite, they already have almost as many or more freedoms than we do, you cannot steal the whole output of humanity and put it in your head. If we do nothing, we'll end up in a permanent dystopian dictatorship and then we'll go extinct. The best case scenario in AI agents world we are heading towards is permanent freezing of all human progress in the current state. Let's start outlawing AI agents on all levels now, put safety standards in place. The AI industry itself begs to be regulated for years now, they have market forces forcing them to be reckless if we'll not put external guidelines to make them all follow safety standards. Right now the one who is the most reckless wins, by building quickly and dirty instead of thoughtfully and carefully. We need to cooperate internationally in order to make GPU companies that make hardware for AI to have mathematical guarantees that they cannot be used for AI agents, only for non-agentic AIs. We need to cooperate with China to force North Korea not to develop AI

agents, too. We'll need to burn current GPUs that allow AI agents and give people some discounts to replace them with non-agentic GPUs. It's already almost too late to stop the AI agents. We shouldn't lose hope and we should use this hope to act now. Wish you the best luck and thank you! What you do is very important!
