This executive order, to put it plainly, is embarrassing to the nation in its current state. Breaking down 'why' into a list, this technology is: Environmentally unfriendly. Full stop. Its wasting obscene amounts of water: <https://www.forbes.com/sites/cindygordon/2024/02/25/ai-is-accelerating-the-loss-of-our-scarcest-natural-resource-water/> It's pollution costs are staggering: https://www.sfoxaminer.com/news/technology/ai-induced-pollution-could-kill-hundreds-cost-billions-researchers-say/article_6449a044-e811-11ef-88d2-473a3ec5a724.html The electricity needs of AI are straining our power grid: <https://www.bloomberg.com/graphics/2024-ai-power-home-appliances/> The power demands of this technology are getting worse, not better; <https://www.forbes.com/sites/bethkindig/2024/06/20/ai-power-consumption-rapidly-becoming-mission-critical/> <https://www.npr.org/2024/07/10/nx-s1-5028558/artificial-intelligences-thirst-for-electricity> The power needs of this tech are actually so high, that some AI developers are funding Nuclear "Start ups" just to hope to meet power demands: <https://www.nbcnews.com/tech/tech-news/nuclear-power-oklo-sam-altman-ai-energy-rcna139094> Not surprisingly, this also resulted in several notable professionals to raise alarm bells for safety and regulatory concerns. Outside of being environmentally unfriendly, Generative AI in particular is the subject of ongoing litigation in courts all over the globe (against multiple companies responsible for creating it, and allegedly sourcing their datasets unethically.) <https://www.musicbusinessworldwide.com/using-copyrighted-content-to-train-ai-without-permission-is-not-fair-use-us-court-rules-in-precedent-setting-thomson-reuters-case/> <https://natlawreview.com/article/hangzhou-internet-court-generative-ai-output-infringes-copyright> <https://www.reuters.com/technology/artificial-intelligence/bollywood-music-labels-seek-challenge-openai-india-copyright-lawsuit-2025-02-14/> <https://arstechnica.com/tech-policy/2025/02/meta-torrented-over-81-7tb-of-pirated-books-to-train-ai-authors-say/> A massive conflict of interest considering we have someone acting in a position of power that stands to benefit from a massive investment in this technology (Elon Musk.) Especially considering he's frequently shown to be acting in very close contact with the standing president, despite not being in a position requiring any hearing/approval/election to be there. <https://ground.news/article/elon-musk-says-grok-3-in-final-stages-outperforming-all-chatbots> https://ground.news/article/openai-rejects-musks-takeover-offer-says-it-was-not-a-bid-at-all_ef3222 Even if we ignore that its bad for the environment, and potentially ethically dubious in areas, the tech is flat out wrong so often that its not even worthwhile to use. I can't even use Google anymore, because the AI summaries it spits out are genuinely incoherent more than half the time. <https://arstechnica.com/ai/2025/02/bbc-finds-significant-inaccuracies-in-over-30-of-ai-produced-news-summaries/> <https://www.techrepublic.com/article/ai-generated-code-outages/> <https://pivot-to-ai.com/2025/02/15/how-ai-slop-generators-started-talking-about-vegetative-electron-microscopy/> Finally, outside of being wrong, its also already showing signs of negatively impacting the critical thinking skills of the work-forces using it the most <https://www.forbes.com/sites/dimitarmixmihov/2025/02/11/ai-is-making-you-dumber-microsoft-researchers-say/> Outside of the technology being a mess, we as a nation have a plethora of other places money like this could, and should, go to. Wasting time on this technology can't come close to helping us if its doing more damage than it could ever help fix.
