Dear Faisal D'Souza and the NITRD NCO Team, Thank you for the opportunity to provide input on the development of the Artificial Intelligence (AI) Action Plan. I appreciate the Administration's efforts to ensure that the United States remains a global leader in AI innovation while addressing the societal implications of this transformative technology. My comments focus on two critical areas of concern: the energy and environmental impact of AI and the effect of AI on jobs and the workforce.

1. Energy and Environmental Impact of AI The rapid growth of AI has led to significant increases in energy consumption, particularly from data centers and the training of large-scale AI models. This raises serious environmental concerns, as the carbon footprint of AI infrastructure contributes to climate change. To address this, I urge the Administration to prioritize the following actions in the AI Action Plan:

- Incentivize Energy-Efficient AI Development:** Encourage the private sector to adopt energy-efficient practices in AI model training and deployment, such as optimizing algorithms, using renewable energy sources, and investing in energy-efficient hardware.
- Establish Environmental Standards for AI Infrastructure:** Develop and enforce standards for data centers and AI-related infrastructure to minimize their environmental impact, including limits on carbon emissions and requirements for sustainable energy use.
- Promote Research into Green AI:** Fund research initiatives focused on reducing the energy consumption of AI systems, such as developing low-power AI models and exploring alternative computing paradigms.

2. Impact of AI on Jobs and the Workforce The widespread adoption of AI has the potential to disrupt labor markets, leading to job displacement in certain sectors while creating new opportunities in others. To ensure that AI benefits all Americans, I believe the government must take proactive steps to protect workers and promote equitable economic growth. Specifically, I recommend the following:

- Mandate Human Oversight in Critical Industries:** Require companies to maintain human workers in roles where AI is deployed, particularly in sectors like healthcare, education, and transportation, where human judgment and empathy are essential.
- Invest in Workforce Reskilling and Education:** Allocate resources to programs that help workers transition to AI-driven economies, including vocational training, STEM education, and lifelong learning initiatives.
- Encourage Public-Private Partnerships:** Foster collaboration between the government, industry, and educational institutions to identify emerging job opportunities and develop training programs that align with the skills needed in an AI-driven workforce.

In conclusion, while AI holds immense potential to drive innovation and economic growth, it is imperative that we address its energy and environmental impacts and ensure that its benefits are shared equitably across society. By incorporating these recommendations into the AI Action Plan, the Administration can strike a balance between fostering innovation and safeguarding the well-being of people and the planet. Thank you for considering my input. I look forward to seeing how the AI Action Plan evolves to address these critical issues.
