Good evening Networking and Information Technology Research and Development (NITRD)
National Coordination Office (NCO), National Science Foundation.

Removing limitations on copyright law will only serve to benefit companies producing AI content, and it will do so by removing the value of current intellectual property. Removing the value from intellectual property will consequently remove the value from their associated industries, and this will affect any creative medium and industry, such industries include but are not limited to Writing, Music, Film, Art, and Video Games among others.

These industries carry huge cultural significance, generate millions of dollars in profit annually, and thus contribute a significant amount to the economy both nationally and internationally. Reducing the value of these industries will also reduce that contribution, and will impact the economy negatively.

Furthermore you can expect to face negative backlash and potential legal action from any large corporations that exist in these industries, as you would be directly attacking their profits.

A pertinent example of this would be Disney, as Disney has historically been an advocate for leveraging copyright to protect their intellectual properties such as Mickey Mouse and Winnie the Pooh.

From a human perspective removal of copyright limitations would be harmful as the resulting damage to these industries would cause the people working in those industries to lose their jobs.

The companies affected would make their employees redundant to try and stay afloat, therefore without an income to support themselves and their families they would not be able to contribute to the economy either.

This would directly impact independent creatives as well, removing their financial contribution to the economy as you destroy their livelihoods.

Finally there is a moral argument to be made that since AI cannot create anything original and only iterates on existing properties, what AI makes cannot be considered art, or anything of value, it is simply slop that contributes nothing to human culture and leaves our society worse off as genuine art is buried among the valueless e-waste produced by soulless programs.

In conclusion, removing copyright restrictions would only benefit the companies producing AI and would negatively impact existing highly lucrative industries, this would have negative consequences for the economy and society that would far outweigh any meager benefits.

Kind regards,
A Voice of Concern
