CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

To whomever may receive this email within the parties involved, I felt the need to send my own statement in regards to this plan regarding letting OpenAI and in a way, nearly every other AI platform not having any sort of legal repercussion for stealing the work of independent creators, deceased artists, and so many other people. Copyright law is a slippery slope in many ways but allowing companies to siphon away the works of creatives and artists is just downright dire for the future of any creative venture. Many artists, animators, and designers are currently out of work due to the AI push and it can only get worse for the industry as a whole if a plan like this were allowed to pass. As a freelance artist and painter I am appalled at the thought of anything pertaining to this passing so I thought I'd give my thoughts on the matter.

I've included a bullet point list as follows:

AI having no restrictions will tank the film industry and games industry.

- Hollywood and many Triple-A game development studios have already dipped their feet into these technologies and have been met with nothing but pushback from anyone that actually consumes the media itself, the only individuals within these circles that praise such practices are shareholders who only care about a personal gain, often resulting in massive sunk cost fallacies.
- Alongside this many companies are hoping to use AI tools that feed off the work of creators to create entire films without any human intervention, automating the entire process. Beyond this, many studios have already started experimenting with using AI to replicate the voices of dead voice actors or actors in general. This is morally unjust in so many ways for anyone with any ounce of empathy. Aiming to have so much automation in these systems will result in creatively-voided films and games, which while cheap to produce will leave zero lasting impact and have nearly zero retention for viewers beyond an initial ironic hate-watching.
- Damaging new ideas is something else that can be a heavy factor due to AI usage, many of the most memorable ventures within Hollywood or the game's industry were rooted in passionate ideas from people with a clear vision. An AI can never do this as it's entirely reliant on stealing the works of other people to create a mishmash of stolen assets. This becoming free reign would impact all creatives in a detrimental way, what's the point in aiming to make your passion project when there's a vampire waiting to suck away everything you've made to make an inferior sloppy copy?

AI has the potential to be protected by copyright due to their funding and backing by certain individuals, resulting in an oxymoron scenario in which they have protection over things they've stolen from others.

- Time and time again companies seem to have a priority over the people when it comes

to the rules, and creatives are already a group that's underappreciated and often unprotected beyond filing a patent or copyright on their artwork, we've seen smaller creatives in the past be exploited through early AI usage already, and certain tech trends such as NFTs or cryptocurrency rug-pulls.

- I am fully under the impression that companies such as OpenAI, OpenSea, or any other AI-related venture could gain not only immunities, but wiggle their way into being able to copyright their systems, which to be frank... is one of the most believably stupid and biased disasters that could happen. Being able to steal everyone else's work while having your own immunities would just be downright disastrous for everyone involved.
- Creative ventures are a difficult thing to even get off the ground nowadays, this hypothetical is entirely possible and a good consideration as to why companies like this do not deserve immunities.

My last point of contention to the general space within what AI occupies; the internet itself. As it stands currently search engines such as Google, Yahoo, Bing, and many alternatives and image boorus are completely filled to the brim with AI Generated content, to the point where many people worldwide are led to believe false imagery, such as that of baby animal pictures are real, when they're in fact entirely falsified and downright fictional images.

The baby peacock is a noteworthy example:

AI Images:

Not a single image here is actually a real depiction of a peacock.

- Beyond what many businesses believe AI has completely poisoned search queries for images and information as a whole, such as AI-Recaps of information or articles. Pinterest is one of the biggest points of contention at the moment for this. Pinterest is a website that's a repository for images all over the internet, mainly for jewelry, arts, reference material and so much more. As it stands now this website is filled with inaccurate AI generated content.
- Misinformation has become ever more dire due to Gen AI content being spread, such as Twitter bots running on different AI-based programs have led to much infighting and just a general influx of generated content, which has resulted in a very toxic online space alongside current political issues. These bots contribute nothing but bloat and wastes of energy.

My final point on this matter is our future, specifically that of children and so many others. AI such as OpenAI and ChatGPT has been encouraged and downright approved for many younger people, such as students in both public schools and institutions such as universities. Not only are students using it for projects or writing assistance, but many

teachers/professors are using it to speed up the grading process. This is a horrible thing to encourage because it not only stifles creativity, but results in a reliance on a tool rather than being able to problem solve in different scenarios. You don't learn from having a machine generate artworks or writing for yourself, the best way to learn is through making mistakes and learning as we grow.

OpenAI gaining immunity to copyright and copyright infringement is a horrible and downright catastrophic scenario and could lead to a complete destruction of our creative industry and most artistry as a whole. These are companies that are business first and empathy later. They do not deserve immunities to something many artists already struggle to maintain themselves. A company such as these do NOT have the right to steal from people that can barely make ends meet in the first place.

This is a machine. It does not have thoughts.

It does not have FEELINGS.

This is a thoughtless program that relies on human creation to function and doesn't deserve equal respect.

Do not let this pass. Thank you for your time.
