AI - including generative AI - is (in some ways) a great invention and useful tool. However it's also important that we protect copyright holders. If a generative AI violates copyright law, or if a copyright is violated in the training of an AI model, the owning company must be held accountable.

Furthermore, any company with a large carbon footprint - regardless of field - must be held accountable for the pollution they're driving.

Thanks for taking these into account.
- August Zellmer, software developer
