Barbie LeBrun

My main concern with AI capabilities is not with current administration. But from our enemies, I am afraid of it. For instance, the current Elon Musk request for a week's worth of productivity bullets, POTUS was supportive. However, there was intense disobedience, propaganda, ordering employees on military camps to disobey. AI propaganda from enemies is a huge concern. It is hard to tell truth from lies with AI. How will the Trump administration assure American citizens that our military leadership, and government leadership will not abuse such advanced technology to misinform American troops and civilians?
