Dear OSTP team,

First, I am thrilled that David O. Sacks is leading the discussions on cryptocurrency and AI - there is no one better to serve in this role. He has been an amazing influence on many people and industries.

That being said, please remember to include the AI impact(s) on health care and healthcare delivery. While there are important discovery, diagnostic, and outcome advances using AI in health care, the involvement of nurses, nurse practitioners (NP), and physicians is crucial to ensure the completeness of assessments and diagnoses. AI lacks the emotional and subtle cue acknowledgment that only human interactions currently possess.

Nurse practitioners, physicians, and nurses should remain on the front lines of any discussions relating to AI and health care. Nurses and NPs bridge the gap between patient care and technology. AI-driven clinical-driven support systems can assist with early disease detection, risk assessment, and treatment planning, but they need input from nurses and NPs to ensure they align with clinical workflows and best practices. NPs, with their expertise in diagnosis and holistic care, can help train AI to prioritize meaningful alerts rather than overwhelming clinicians with unnecessary data.

Nurses and NPs are excellent at assessing patients for subtle cues due to their training, clinical approach, and patient-centered care model. Nurses and NPs are trained to assess the **whole patient**, not just the disease or symptoms. They consider physical, emotional, psychological, social, and environmental factors that may affect health. This broader perspective allows them to pick up on subtle changes in demeanor, non-verbal cues, or minor physiological shifts that could indicate an underlying issue.

Thank you for your consideration.

Beth Haney, DNP, FNP-C, FAANP, FAAN

Doctor of Nursing Practice, Nurse Practitioner

Founder, Luxe Aesthetic Center, Inc.

Former Mayor and Councilwoman of Yorba Linda, California
