My name is Brad Duke. I am a professional artist working in the entertainment industry.

Allowing OpenAI and Google to train on anything is a breach of copyright, and will not, as the plan claims, "secure a brighter future for all Americans." It will secure a profitable future for some large tech companies, and some of their leaders, while the workers and general Americans suffer.

Allowing this to go forward will hurt workers like me, and will lead to even more layoffs than are happening right now. With AI as it currently is, thousands of jobs are disappearing, with layoffs affecting thousands of people, including many that I know. This isn't a joke. People are losing their jobs because of this. Both on the artistic, and more technical side of things. Giving AI a blank check will have a much bigger impact, and will lead to many more jobs disappearing.

Individuals have created magnificent things over the years, whether that's art, technology, or something else. Big tech companies have also boomed for years as many coders, artists, developers, and others have put so much effort into various companies, products, experiences, and art. Now AI tech companies want to be able to steal all of that without compensating those who own what they take, and then use it to replace the very people that created everything they stole. This is immoral technological predation. China may do that, but China is not a nation "of the people, by the people, and for the people." China is predatory, and gives no concern to its people; it dominates its people, chewing them up and spitting them out. Letting big tech companies have open range over everything is allowing blatant breach of copyright--allowing theft of intellectual property. This will reduce jobs, breach intellectual property security, and be a kick in the teeth to anyone that has ever, or will ever create something.

Do not allow this. AI should be carefully checked, monitored, and responsibly created. Big tech using the fear of China to accelerate the means to trample everything in its path is deplorable.

Brad Duke
