To those it concerns,

I am not going to waste more time on this than you likely will throwing this out. The United States government as it is currently organized is clearly not interested in listening to the values of the American people, despite the fact that their power comes from those same people. That, however, will not stop me from voicing my own oppositions.

AI and companies who program and produce mass learning software have no right to ignore the law. "Burdensome" laws are there to protect the people, and progress has no place when the people are used as its stepping stones.

I implore you to cease all attempts to allow these groups to circumvent the laws in place, which are already outdated and allowing them to run rampant. It is the people who suffer without oversight on AI development, and the rampant scraping of data for machine learning software without consent of those people is not only theft, but it will only cheapen the impact of artificial Intelligence in the long-run. Machine learning tends to a homogenization of content, as it aims to boil down hundreds of thousands of points into a code-based system of averages.

This is not innovation, it is mere repetition. A system of averages that will only cause stagnation in ideas. We have already seen it conflate true and false information into a meaningless mess of words, and replace art and photography with nonsensical masses of flesh and clashing non-ideas. If left unimpeded (as you are flagrantly proposing) endangers the entirety of the internet as a source of information and connection, reducing it to a sterile noise of computer generated slop.

The death of the internet is the modern burning of the Library of Alexandria, and if you have any remaining shred of integrity as a power in government, you will force these companies to be responsible with their products and programs, as, let us be honest, they will not do so of their own accord.

My personal faith in the American government falls away with every day. I would love to be proven wrong. Do what you were put into power to do, and protect people, not computer programs or companies.

Best,
Brandon Howard
