I believe that unrestricted development in the AI sector will harm many Americans and businesses alike, while only enriching a few wealthy individuals.

Americans have long used copyright protections to ensure that innovators, artists, and writers are properly compensated for their work and continue to develop their craft. If AI is allowed to be freely trained on copyrighted material, then it is stealing the work of everyone who helped build up the fields of the arts and sciences. An individual may not freely take the copyrighted work of another for the sake of profit, so I do not see why a large company should be allowed to do so.

AI companies have posed the development of AI as a national security matter, but it is solely a business matter. They are trying to use the fear that China might develop better AI faster to bypass regulations. This new "tech arms race" will likely create many of the same problems brought on by the nuclear arms waste. Both are dangerous, environmentally polluting, and have little use to the average American.

The government should resist the pressures of the tech industry to grow at a cancerous rate. By resisting these pressures, the government can better protect the American people.

Brittany A.
