In re: 500,000 chips, nuclear energy to power one of world's largest AI supercomputer

United Kingdom-based Fluidstack has signed a memorandum of understanding (MOU) with the government of France to build an artificial intelligence (AI) supercomputer. The company announced it at the ongoing AI Action Summit in Paris. French President Emmanuel Macron was present at the summit. It is a \$10.3 billion (€10 billion) project, as per Macron's announcement.

Dear Sirs,

for electronics defense and create the quantum 3D space telecom amnd quantum energy AI data centers beyond common chips, internet, GPS, satellites and nuclear energy, we offer you and investors our **NextGen 3D quantum harmonics and photonics, AI/VR/AR 3D space telecom and quantum cybersecurity tech** with potential trillions or unlimited parameters of our quantum space information and communication supersystems to secure cyberspace infrastructure for the internet, fintech, energy, healthcare, aerospace and defense.

We accordingly offer you and investors to jointly create the **Intl. Quantum Telecom Fund & Trade Exchange (IQTFTE)** based on our project, bylaws, financial instruments and tech.

Said IQTFTE would issue its **NextEra telecom development bonds** that can be structured by us based on my two new macroeconomics theories and models with new financial instruments.

In quantum tech, we can substitute common semiconductors, PCs and telecom towers by our 3D quantum electronics in quantum photonics and virtual and augmented reality based on my **new theory and model of unified quantum field** and your financing, to conquer the \$Trillions consumer electronics and telecom market.

Our telecom presentation is available. AI data centers can be energized by our **modular quantum tokamak** beyond AI energy competition.

In re: my **theories of quantum field gravity, augmenter reality in 3D imaging and quantum harmonics in vacuum superconductivity** in Casimir effect and **quantum photonics** enable the creation of a 3D quantum transmitter for space internet, TV and computing, quantum nanocomputers, applications and space telecom in **quantum AI** based on photons interactions, as proven in physics and enable the creation of over-horizon **quantum energy kinetic superweapon** in anti-gravity to make enemies' ballistic and hypersonic missiles obsolete, with impregnable space, air, land and naval defense.

My book "**NextGen Physics and Astrophysics**" comprising new theories of quantum physics and astrophysics is available as well as my 18 pp. article on **quantum electronics** to create quantum electronic nanodevices and nanocomputers for global customers in **quantum telecom and cybersecurity**. Said my paper has been accepted for IEEE-ICECEIC-2019 Conference in India.

I was the chair, 9th session at the ICP Prague 2016 18th International Conference on Physics and have now received the speaker invitation for **Global Summit on Physics**, September 27-28, 2018 in Madrid. My recent paper on quantum fusion has been published by SciFed Journal of Nuclear Science and same concerns my book "Beyond Einstein and the Big Bang, NextGen Physics".
