Hello there,

I am writing to express my great concern with the expedited journey into AI for the American Government. AI typically is trained on stolen and unreliable information. Without the proper vetting, AI can guide us to bad outcomes, unreliable narratives, and incorrect information. Further than that, it steals information from others without their permission in order to grow and profit from it. This would become a legal nightmare for anyone and everyone involved.

There should be extreme guardrails around the use and development of and with AI, and my suggestions start here:

1. **The building of an AI should be extensively moderated and managed.** It cannot be trusted for anyone or anything to build and train an AI. Any data it has access to can resurface whether desired or not.
2. **AI is not fully understood by the majority of people who use it.** Many folks are not aware that they should approach the information being presented cautiously. AI can be useful and help expedite things but one must be an extreme skeptic when engaging with it's content. AI has an incredibly hard time telling the truth. When interacting with the AI, it can hallucinate and attempt to come up with an answer to satisfy the query rather than answer honestly. How can we prove the AI is reliable and truthful? Again, it must be moderated and managed careful.
3. **Anything an AI has been used to create must and should be vetted by a human.** In some cases, an AI can expedite a process; however, much like a great coding practice, all items should be reviewed by a respected and trusted peer. This means that any time a document is created or a decision is made it must not be acted upon with a human expert's eyes reviewing it. This means if a writer uses AI a separate unrelated writer should review that work.
4. **AI is expensive and could reduce some resources but will create new, worse, more expensive problems.** Many Americans have interacted with various AI chat bots, and many of those same Americans can tell you the various hilariously bad outcomes with these bots. Bots can confuse customers, create frustration, give incorrect information, and more. Through the lens of the American government, we can see these same sorts of bots and suggestions propagating into larger more prolific and dangerous issues compared to a silly company chat bot sending the customer bad or incorrect information. What if the result of an AI bot suggest dangerous actions to a citizen? What if it suggested unconstitutional or illegal actions? Would the government official understand the full weight of that?
5. **AI will hurt Americans by stealing from them and then hurt more Americans by lying to them.** Companies, technologies, code, art, books, articles and more will train these AI models and cause American entrepreneurs, small & large businesses, and organizations damage.

We do not know the full effects of the AI fad wave right now -- but we are already seeing

companies pulling away from their AI efforts as well. It is dangerous, It is untested, and without proper guardrails we will see extensive damage to the people, the government, & the trusted relationship between both.

These are the most surface level of issues I can see; however, we have not yet begun to dig into the security issues that can and will arise from such actions. Once the AI has been trained on confidential information within the government? What protections will we have that the proper people with the proper clearance will have access to the data that they should? Take the time to understand the full gravity of what training an AI model entails. How do you ensure safety and security of who is using that information? Can you guarantee that the model can "forget" information it shouldn't have access to?

There has not been enough time to study and learn the ramifications of these sorts of actions. Once the dangerous and scary information is out there -- there's no going back.

AI must be integrated with slowly, carefully, and with an extremely watchful eye. I want to urge you to not rush into this and to ensure proper protections are in place for the American people and the government as well.

Thank you,

Chelsea Winfree
