PROACTIVELY SECURING AMERICA'S AI FUTURE
A COMPREHENSIVE APPROACH BY MNA VENTURES HOLDING INC

CHENYI ANG, MANAGING DIRECTOR
MNA Ventures Holding Inc

07 FEBRUARY 2025

Executive Summary

Artificial Intelligence (AI) systems are at the forefront of global innovation, driving advancements in critical sectors such as defense, energy, healthcare, and infrastructure. However, as these systems grow more sophisticated, they also become more vulnerable to adversarial threats.

MNA Ventures presents an innovative patent-pending AI-powered red-teaming and audit tool that proactively secures AI systems, ensuring resilience, trust, and compliance. This whitepaper outlines how our solution strengthens U.S. national security, bolsters America's leadership in trusted AI, and mitigates the risks posed by adversarial actors.

PROACTIVELY SECURING AMERICA'S AI FUTURE **A COMPREHENSIVE APPROACH BY MNA VENTURES HOLDING INC**

1. Introduction: Securing America's AI Leadership

AI technologies are transforming how nations innovate, compete, and defend their interests. While the U.S. remains a leader in AI innovation, emerging threats from adversaries—both foreign and domestic—underscore the need for robust AI security frameworks.

1.1 Key Challenges

1.1.1 Adversarial Attacks:

- AI systems are vulnerable to threats such as data poisoning, model inversion, and prompt injection.
- These attacks can compromise national defense, disrupt critical infrastructure, and undermine public trust.

1.1.2 Critical Infrastructure Risks:

- AI is embedded in defense, energy grids, and healthcare systems, making them high-value targets for adversaries.

1.1.3 Global AI Competition:

- Nations like China are advancing rapidly in AI, but their lack of transparency and ethical considerations creates opportunities for the U.S. to lead in secure and trustworthy AI.
-

2. The Solution: MNA Ventures' AI Red-Teaming Tool

Our AI-powered red-teaming tool offers a proactive approach to securing AI systems, enabling the U.S. to mitigate risks and reinforce its leadership in global AI governance.

Core Features:

2.1 Adversarial Testing

- Uses GANs to simulate real-world adversarial attacks, exposing system vulnerabilities before deployment.

2.2 Dynamic Threat Adaptation

- Employs reinforcement learning to mimic evolving threats, ensuring continuous improvement in security measures.

2.3 Compliance-Ready Reporting

- Aligns with frameworks like the NIST AI Risk Management Framework and EU AI Act, providing actionable insights for governance.
-

3. How This Tool Secures America's AI Leadership

1. National Security and Infrastructure:

Defense Applications:

- Protect AI-driven military systems, including autonomous vehicles, threat detection platforms, and cybersecurity operations.

Critical Infrastructure:

- Safeguard AI systems in energy, transportation, and healthcare from adversarial manipulation.

2. Global Leadership in Trusted AI:

Differentiator Against Adversaries:

- While competitors like China excel in rapid AI development, their lack of ethical considerations provides the U.S. an opportunity to lead in secure, responsible AI.

Building Alliances:

- By setting the gold standard in AI security, the U.S. can strengthen partnerships and deter adversarial actors.

3. Proactive Risk Mitigation:

Urgency of Action:

- Adversarial threats are evolving rapidly, requiring immediate adoption of proactive security measures.

Preventing System Failures:

- Neutralize threats before they cause disruptions to critical operations.
-

4. Proposed Roadmap for Collaboration

4.1 Phase 1: Pilot Program

- **Objective:** Demonstrate the tool's effectiveness in securing defense and critical infrastructure AI systems.
- **Scope:** Conduct targeted testing on systems in defense, healthcare, and energy sectors.

4.2 Phase 2: Integration with National Frameworks

- **Objective:** Embed the tool into the U.S. AI governance frameworks to ensure compliance and resilience.
- **Outcome:** Develop tailored modules for public and private sector deployment.

4.3 Phase 3: Nationwide Rollout

- **Objective:** Scale the tool across all critical sectors, creating a unified standard for AI security in the U.S.
-

5. Use Cases

5.1. Defense and Intelligence:

- Test and secure AI models in military drones, surveillance systems, and cyber threat detection platforms.

5.2. Critical Infrastructure:

- Protect AI in smart grids, autonomous transportation, and emergency response systems from adversarial threats.

5.3. Healthcare:

- Secure diagnostic and predictive AI tools to protect sensitive patient data and ensure accuracy.

5. Call to Action: Strengthen America's AI Security Today

America's position as a global AI leader depends on the trust, safety, and resilience of its AI systems. MNA Ventures invites collaboration with government agencies, defense contractors, and industry leaders to secure critical systems and set new global standards for ethical AI.

Join Us:

- Secure AI in critical infrastructure.
- Protect national defense systems from adversarial threats.
- Reinforce America's leadership in secure and responsible AI.

Contact us today to schedule a demonstration or discuss how our tool can contribute to America's AI strategy.
