

Craig Axtell

AI has the potential to be the best thing that has ever happened to some people when used to help people and it has the potential to be the worst thing that has ever happened to other people when used to do bad things. The aviation industry uses a process called a System Safety Assessment. That process has created a method of travel that is the safest in the world. The Safety Assessment Process can be used for any system that has the potential for safety risks. Please consider using this process to make AI as safe as practical for the public.
