

Submission DAIMLAS - AI Ecosystem Builders, Comment by Joseph Wehbe:

To maintain global leadership in AI, the US must create pathways for more talent, and industry to participate in the AI economy. According to the 2024 Global AI rankings, the US ranks #1 overall, but we are ranked #2 on both “Operating Environment” and “Government Strategy”. Here’s how we can achieve #1 ranking on both.

Recommendation 1: invite leaders from all AI Labs/AI Centers of Excellence/AI Degree programs/Investors with AI thesis/Industry Associations/AI k-12 programs in the East/West Coast to meet in Boston/Washington DC/Silicon Valley respectively for a summit to share their resources and how more stakeholders in every corner of America can participate. **Recommendation 2:** The AI ecosystem must be anchored in Academia where Chief scientific advisors lead, so stakeholders who want to utilize American compute should connect to their local institution via a local AI center of excellence/AI lab. These labs may have alliance programs/screening mechanisms for the public to participate. **Recommendation 3:** Every community college, state college, Ivy league, k-12 school should increase AI awareness/offers at the grassroots level to evangelize AI use cases/AI jobs/R&D. This encourages more State governments to establish an AI strategy. DAIMLAS has built 4 American AI ecosystems in MA, DC, CA, NJ and is ready to continue to support, by organizing the proposed summit, and to contribute to building local AI ecosystem platforms in all 50 States (Made in America AI) that have commercial opportunities globally. **Recommendation 4:** DAIMLAS has the data of all American AI Ecosystems and can map all the resources in every corner of America so that we can contribute to Government Strategy in AI, and AI R&D.
