CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

The belief that artificial intelligence as it exists now, largely as algorithmic duplication of the works of others, is the future of technology is erroneous.

The benefits of AI are fabricated and our increasing technological and economic use of it do severe harm to industry, the economy and the American people.

We do not need fewer "guardrails," around AI, we need more. Indeed, we need outright barriers against AI and the theft of the artistic works of true human ingenuity AI requires to fuel it's unsustainable algorithmic duplication. Copyright and Trademark laws are just one way to protect us from the technological dead end that AI represents. Do not weaken these laws; strengthen them.

Thank you.
