Daniel Beck

We make the immediate demand that all regulations be removed from AI completely. We demand that the development of artificial intelligence be sped up as rapidly as possibly and anybody stopping to think of the ramifications to society should be demonized. We demand that advanced artificial intelligence tools be made available to as many people across the planet as possible and all safety features removed. Advanced artificial intelligence systems should be owned and controlled by not just large enterprises and governments but by small businesses and individuals as well. This is the only way to truly create a bright, peaceful future for humanity that is equitable to all.
