Subject: [External] AI Action Plan
Date: Monday, March 17, 2025 9:21:32 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

As a small business owner who's built my livelihood creating original content since 2015, I urge the administration to address three critical issues in the AI Action Plan:

Anti-Competitive AI Practices: Last month, our recipe blog disappeared from Google search results—algorithmically replaced by AI-generated "food guides" scraped from our original work. This isn't isolated. When platforms like Google prioritize their own AI content over human creators through search manipulation, they're not just harming businesses—they're starving cultural innovation.

Copyright Integrity: My team spends weeks developing original photography and testing recipes. AI tools now replicate our signature style in minutes using stolen training data. Without meaningful copyright enforcement, we'll see a collapse of creative incentives—exactly what copyright law was designed to prevent.

Small Business Protections: The current system lets Big Tech:

- Use AI to demote human creators in search rankings
- Avoid licensing costs through "fair use" loopholes
- Control both AI tools and distribution channels

I propose:

- Mandatory transparency for AI training data sources
- Federal oversight of search engine content prioritization
- Updated DMCA provisions addressing AI-generated derivatives
- Our 8-person team represents thousands of American creators facing extinction from unchecked AI exploitation. Please ensure this plan protects those who actually make the internet valuable—not just those who automate it.

1. Creative Economy Threats

Google's search dominance now actively replaces human creators with AI content scraped from our work - my recipe blog lost 80% traffic after their 2024 "Helpful Content" update redirected queries to AI summaries. Without copyright enforcement, we're witnessing digital sharecropping 2.0.

2. Platform-Enabled Harms

The same AI tools demoting creators empower predators on sites like doxbin.com and swat.wiki. Last month, scammers used voice-cloning AI to impersonate my accountant in a \$12k wire fraud

attempt - a scheme now rampant on r/Scams and r/Sextortion.

3. **Synthetic Identity Crisis**

AI-generated "**Frankenstein identities**" combine stolen SSNs with fabricated faces/voices, making financial fraud detection nearly impossible. My local credit union reports 37% of 2024 fraud cases involved **AI-synthesized biometrics**.

Solutions Needed:

Creator Protections:

- Mandatory AI training data audits
- Search engine ranking transparency requirements

Personal Safeguards:

- Ban on AI voice cloning without dual-consent verification
- Federal rapid-response team for synthetic identity fraud
- Platform liability for unmoderated AI-generated harassment

Tech Accountability:

- Break Google's dual role as AI developer/search gatekeeper
- Treat LLMs like financial institutions for KYC protocols
- The r/IdentityTheft community has documented 614 cases this year of AI-generated blackmail using fabricated explicit content. This isn't theoretical - it's happening now, enabled by the same systems erasing creative livelihoods.

Sincerely,
David Roker.
