To Whom it May Concern,

As a digital content creator specializing in online recipe publishing, I appreciate the opportunity to provide input on the development of the AI Action Plan. While AI presents exciting opportunities for innovation, I urge policymakers to consider its impact on independent creators, particularly in the areas of intellectual property rights, content attribution, and search engine visibility.

1. Intellectual Property Protection for Online Content

AI models frequently train on publicly available content, including recipe websites, blogs, and digital publications. Weakening copyright protections could lead to AI-generated content replicating original work without proper attribution or compensation to the creators. Policymakers should ensure:

- Stronger enforcement mechanisms against unauthorized content scraping.
- Clear regulations requiring AI companies to obtain permission before using copyrighted material for model training.

2. AI's Impact on Search Visibility for Independent Creators

Search engines, including Google, increasingly feature AI-generated summaries at the top of results, reducing traffic to original content sources. This disproportionately affects small creators who rely on organic search traffic for revenue. I recommend:

- That AI-generated search snippets have clear attribution and direct links to the sources it's pulling from.
- Policies ensuring that AI-generated results do not unfairly replace or suppress organic search rankings for independent publishers.

3. Ethical AI Development and Content Attribution

AI-generated content should adhere to ethical content attribution practices. If AI systems derive inspiration or direct information from specific sources, those sources should be credited, similar to how academic citations function. I encourage:

- Development of AI attribution standards, ensuring that digital content creators receive recognition when their work informs AI outputs.
- Implementation of an opt-out mechanism for creators who do not wish to have their content used for AI training.

By addressing these concerns, the AI Action Plan can balance technological advancement with fair treatment of the creators who contribute to the internet's wealth of knowledge. I appreciate your consideration and look forward to policies that support both AI innovation and independent content creators.

Best,
