Subject: Response to RFI “Development of an Artificial Intelligence (AI) Action Plan”

Submitted by: Dr. Lance Eliot, AI Scientist

Emailed to: [REDACTED]

Submission Basis:

This is a submission in response to the RFI issued by the Networking and Information Technology Research and Development (NITRD) National Coordination Office (NCO) on behalf of the Office of Science and Technology Policy (OSTP), which requests input from all interested parties on the the Development of an Artificial Intelligence (AI) Action Plan (“Plan”).

As required by the RFI, this requisite statement is included herein: “This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.”

Introductory Remarks

As a globally recognized AI scientist, including the author of AI columns amassing over 8 million views and podcasts amassing over 350,000 downloads, and as an acclaimed AI practitioner and AI scholar, and as having appeared on national and international TV and online broadcasts, and as author of several top-ranked AI books, and as an invited speaker and keynote at major AI conferences, and having received numerous awards and honors in the field of AI, I do herein offer input to the Plan.

The Plan, as stated in the RFI, seeks to “define the priority policy actions needed to sustain and enhance America's AI dominance and to ensure that unnecessarily burdensome requirements do not hamper private sector AI innovation.”

I will, by necessity of the RFI stipulations, be brief in the response shown here and notably provide cited references to additional content that further explains and articulates my mindful and reasoned positions on these vital and complex matters.

The focus of this response concentrates on five key selected AI policy topics. Many additional AI policy topics can be addressed and, indeed, require being closely addressed. Additional content can be provided to offer commentary on such topics as might be requested.

Five Key Selected AI Policy Topics

The five AI policies addressed here are as follows.

(1) AI Innovation and Governmental Considerations

The U.S. government can and does play a crucial role in fostering AI research, AI development, and AI deployment through various means, such as funding, regulations, and public-private partnerships. Policies should consider how to balance AI innovation with responsible oversight, ensuring that AI advancements benefit society while maintaining competitiveness in the global AI race.

(2) AI and Labor Impacts

The U.S. government should carefully consider and establish or re-establish AI policies that adequately address job displacement, worker retraining, economic shifts, and other labor-impacting facets of AI. Without an updated strategy, large segments of the workforce may face economic hardship, while industries requiring AI expertise might experience labor shortages.

(3) AI and Privacy

The U.S. government should review, assess, and adjust or add new AI policies associated with data privacy. Modern era AI relies on vast amounts of data, raising concerns about how personal information is collected, stored, and used. Clear and up-to-date policies on data privacy and AI-based surveillance can help protect citizens' rights while enabling innovation in sectors such as healthcare, finance, and law enforcement.

(4) AI and Ethics/Law

The U.S. government should be cognizant of AI ethics and legal/regulatory considerations and revise and/or establish AI policies that ensure transparency, fairness, and accountability in AI decision-making. This is crucial to public trust in AI and the expanded implementation of AI in society and industry.

(5) AI in National Security and Defense

The U.S. government policies on AI need to balance national security interests, ensuring responsible AI deployment. AI increasingly plays a keystone role in cybersecurity and AI-enabled and autonomous military systems. Establishing up-to-date guidelines on AI's role in defense will help balance national security interests with ethical/legal considerations and global stability.

Conclusion

The effort to solicit this input to America's AI policies is greatly appreciated and an important means of maintaining and bolstering U.S. leadership in the advancement of AI. Thoughtful policymaking is essential to ensure that AI technologies are developed and deployed in a manner that promotes innovation, safeguards national security, and keeps America at the forefront of AI-driven prosperity.

I welcome providing additional input to the administration and engaging actively as the American AI policies process proceeds.
