

Office of Science and Technology Policy Executive Office of the President The White House Washington, D.C. 20502

March 6, 2025

Subject: Response to Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

"This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution."

Dear White House AI Policy Leaders,

Eightfold AI appreciates the opportunity to provide input on the AI Action Plan as directed by Executive Order 14179, "Removing Barriers to American Leadership in Artificial Intelligence." As a leader in AI-driven talent solutions, we strongly advocate for integrating workforce intelligence into the national AI strategy. America's ability to maintain AI dominance depends not only on technological advancements but also on a skilled workforce prepared for the future.

In the short tenure of the new administration, they have made their objectives clear:

1. Skills-Based Hiring and Talent Management

On March 4, President Trump addressed Congress, stating "We believe that you should be hired and promoted based on skill and competence, not race or gender. You should be hired based on merit." This is further highlighted by Executive Order 14170: Reforming the Federal Hiring Process and Restoring Merit to Government Service and Executive Order 14173: Ending Illegal Discrimination and Restoring Merit-Based Opportunity.

2. American Supremacy in AI

On February 11, Vice President JD Vance delivered remarks at the AI Action Summit in Paris, France stating 4 objectives:

- To ensure that American AI technology is the gold standard globally;
- To avoid excessive AI regulations;
- To remove ideological bias from AI
- To chart a pro-worker growth path for AI

We believe Eightfold AI is the enabler that will help America achieve these objectives. For the past decade, Eightfold has leveraged AI to enable some of the largest enterprise and

public sector customers in the world to enhance workforce skills understanding, skills-based hiring, internal mobility, re-deployment, and resource utilization.

Eightfold AI enables the identification and development of critical, future-proof skills through AI-driven workforce intelligence. This will ensure that American workers remain competitive in an evolving global economy. By leveraging comprehensive talent data, Eightfold AI can anticipate labor market trends, identify skill gaps, and proactively reskill the workforce to meet national security and economic needs. Additionally, Eightfold AI's AI-driven matching technology demonstrates a positive correlation between match scores and employee performance, proving the platform's ability to objectively assess skills and merit beyond traditional credentials like degrees. This reduces bias and expands opportunities across diverse talent pools. Eightfold AI's technology supports AI-driven career pathing, personalized learning recommendations, and automation of redundant HR processes, accelerating productivity while ensuring that workers remain relevant in an AI-driven economy.

Eightfold has extensive experience working with public sector customers, leveraging its Talent Intelligence Platform™ to enhance workforce development and employment services. Eightfold's platform empowers government agencies to improve recruitment and foster long-term workforce resilience, ensuring the right talent is deployed in key roles. By providing data-driven insights, Eightfold helps secure the brightest minds, supporting America's leadership in an increasingly competitive and complex global landscape. Below is a summary highlighting Eightfold's collaborations with a few public sector customers:

	U.S. Department of Defense (Defense Innovation Unit) - Eightfold is developing the GigEagle platform for the Defense Innovation Unit within the Department of Defense, a modernization initiative for the National Guard and Reserves to help 1.3M military personnel. AI will be used for determining skills and reskilling needs, including leveraging a talent marketplace.
	U.S. Department of Labor - Eightfold was the grand prize winner of the Department of Labor Veteran Employment Challenge, to help 200,000 transitioning veterans and spouses annually.
	State of New York - Eightfold technology powers the New York Commonwealth Virtual Career Center, the first comprehensive fully-digital system in the US to connect businesses, citizens, and state services. The Virtual Career Center uses AI to provide a full suite of career services, with the mission of reducing unemployment and meeting the expectations of modern job seekers with a valuable public service.

Eightfold understands the paramount importance of security for its clients. Eightfold has achieved significant milestones in its journey towards obtaining **IL4** and **FedRAMP** readiness to meet compliance and security requirements, particularly for public sector clients.

FedRAMP Readiness:

- Eightfold has achieved FedRAMP Ready certification for moderate SaaS, hosted on AWS GovCloud, and is expected to achieve full Authorization in March 2025.

- The annual review has been completed and is currently undergoing evaluation by the FedRAMP Program Management Office (PMO).
- Eightfold is seeking support from the Air Force and Army for related certifications.

Impact Level 4 (IL4):

- Eightfold has achieved a DOD-compliant environment aligned with IL4 through sponsorship from the Defense Innovation Unit (DIU).
- Obtaining an IL4 Authorization to Operate (ATO) from DIU and the Defense Information Systems Agency (DISA), which includes necessary documentation and assessments.

Current Challenges in the US Federal Workforce

The U.S. federal government employs millions, yet lacks a unified, real-time view of its workforce's skills. This gap hinders strategic planning, limits adaptability, leads to governmental inefficiency, and risks ceding competitive ground to nations and industries that leverage AI-driven talent insights. Eightfold AI proposes a transformative solution: deploy our proprietary, deep-learning AI - purpose-built for talent intelligence - to create a dynamic, comprehensive skills inventory of the entire federal workforce.

Federal agencies operate in silos, with no centralized, up-to-date understanding of employee skills - both explicit (e.g. listed certifications) and inferred (e.g. capabilities derived from experience). As global industries evolve rapidly, driven by technology and shifting demands, the government must know **what skills it has, what it needs, and how those skills trend across regions, functions, job families, and agencies**. Without this, workforce planning remains reactive, not proactive.

According to Executive Order 14170, within 120 days, the Federal Government shall develop a Federal Hiring Plan that promotes merit-based hiring, regardless of race, sex, or religion, decrease government-wide time to hire to under 80 days, provide a better applicant experience, and integrate modern solutions to meet these needs.

Our Solution

Eightfold's solution addresses exactly the needs spelled out in Executive Order 14170. By leveraging AI, Eightfold's solution is the only solution in the market that delivers **merit-based talent outcomes**. In fact, our AI-driven Match Scores have been validated to be **positively correlated with performance and tenure**. Additionally, Eightfold offers candidate masking of race, gender, or religion, ensuring talent is hired and promoted by merit alone. Eightfold's solutions have decreased time-to-hire across our best-in-class customers by **20%** and increased hiring efficiency by **92%**. Our candidate experience is unparalleled, as demonstrated by visitor-to-applicant conversion rates **4x** industry averages for our Personalized Career Site product, with all outcomes achieved only by leveraging Responsible AI.

Eightfold's AI platform can leverage OPM's USA Staffing to deliver a single, dynamic skills inventory that updates in real-time. By analyzing both structured data (e.g. resumes, job titles) and unstructured data (e.g. project reports, training histories), our AI uncovers not just stated skills but also inferred competencies. This enables agencies to:

- Monitor supply and demand: track existing skills against emerging needs, by agency and region
- Anticipate trends: compare federal skill trajectories to global industry benchmarks for full situational awareness while enhancing mission readiness
- Optimize resources: identify gaps, redeploy talent internally, and prioritize upskilling - all without costly external hiring
- Illustrate not only where employees are deployed but where they are needed most

For example, an agency could instantly see how many employees in the Midwest have cybersecurity-adjacent skills, infer untapped potential from related experience, and adjust training pipelines as threats evolve - all in weeks, not years.

Case Study: GigEagle at the Department of Defense

The Department of Defense (DoD) offers a practical example of this approach through its [GigEagle](#) initiative (GigEagle.mil), powered by Eightfold's AI technology. GigEagle captures the commercial skills that Reservists and National Guard members develop in their civilian jobs - such as data science or logistics optimization - and maps them to specific DoD projects. Instead of recalling these part-time personnel for routine tasks like painting fences (a holdover from active-duty assignments), GigEagle deploys them to high-impact roles, like building real-time deployment dashboards or solving AI-driven challenges. This shift maximizes talent utility and mission outcomes. While the White House RFI's scope extends beyond DoD-specific needs to the broader Government workforce, GigEagle demonstrates how AI can unlock hidden skills, align them with pressing demands, and keep pace with change - principles directly applicable government-wide.

Why Eightfold AI?

Unlike generic skills-matching tools, our proprietary deep-learning engine was designed specifically for talent intelligence. It excels at processing complex, messy data - common in government systems - while continuously learning to refine its insights. This isn't a static snapshot; it's a living system that adapts as needs shift. Our proven success with large enterprises and the DoD (via GigEagle) underscores our scalability and precision, positioning us to serve the federal workforce comprehensively.

Impact on National Competitiveness:

A skills-smart government can pivot faster, innovate smarter, and lead globally. By equipping agencies with real-time talent visibility, Eightfold AI empowers the U.S. to stay

ahead of technological and economic shifts - ensuring our workforce remains a strategic asset, not a liability.

The Critical Role of AI in Workforce and Economic Competitiveness

- **Developing Skills for Global Competitiveness**

- The ability to effectively mobilize and upskill workforces has been a key factor in determining global leadership. In today's landscape, artificial intelligence (AI) has become the new frontier in the great power competition. For America, the capacity to integrate AI into workforce development will be pivotal in maintaining its leadership on the world stage. The efficiency and innovation with which the U.S. can harness **AI to upskill its workforce** will directly impact its geopolitical and economic standing, shaping the nation's future role in this high-stakes global race.
- It's crucial to have a skilled workforce ready for today and tomorrow. Eightfold AI's Talent Intelligence Platform (TIP) has helped Federal agencies by creating a **skills-based** inventory of the entire workforce, mapping current and future skills to open roles. It ensures alignment between employee skills and job requirements and between workforce strategies and agency goals while staying ahead of industry trends and disruptions to ensure readiness for evolving demands in AI.
- By focusing on **future-proof skills and an AI-ready workforce**, the platform helps maintain the competitiveness of American workers amidst advancements in technology.
- Eightfold AI's platform utilizes a combination of enterprise talent data and public market data to predict labor market trends accurately. It highlights potential skill gaps and provides actionable insights to address these deficiencies through proactive reskilling efforts. This approach not only ensures the workforce can meet the demands of national security but also supports broader economic goals by maintaining a highly skilled and adaptable labor force.

Eightfold Occupational Mobility Network

Using Eightfold skills data, Eightfold has published topical reports such as

How the U.S. Can Reshore the Semiconductor Industry

<https://eightfold.ai/learn/how-us-can-reshore-semiconductor-industry/>

- **Merit-Based Hiring for National Growth**

- Merit-based hiring involves selecting candidates based on their skills, qualifications, and potential rather than relying on traditional proxies such as degrees or educational pedigree. President Trump espoused this approach as a key principle in workforce strategies to ensure that hiring decisions are fair and unbiased. By focusing on merit, the strategy aims to attract and retain the most capable individuals, thus fostering an efficient and **competent workforce**.
- Eightfold AI's Talent Intelligence Platform uses advanced AI algorithms to match candidates to job roles based on an extensive analysis of their **skills**, **experience**, and **potential**. The platform has demonstrated a strong positive correlation between the match scores it generates and actual employee performance. This indicates that the technology can objectively and accurately assess a candidate's suitability for a role, moving beyond traditional educational credentials. As a result, this technology helps in making merit-based hiring decisions that are unbiased and inclusive.

Please refer to the blog below for details on Skills Based Hiring: <https://eightfold.ai/blog/importance-hiring-for-skills/>.

- Eightfold AI's platform is designed to evaluate candidates primarily on their skill sets and competencies. By doing so, it mitigates the biases that may arise from over-reliance on educational backgrounds or previous job titles. This approach widens the scope of opportunity for individuals from diverse backgrounds and supports the creation of a more inclusive workforce. Eightfold's Match Score uses skills-based metrics to evaluate candidate-job fit, employing machine learning techniques to predict matches based on job requirements. The platform has been validated to correlate with Match Score and Retention. As the only ones in the industry to show a correlation between **Match Score and performance**, we can be confident our AI match scores enable merit-based opportunities.

- **Ensuring Compliance with Federal Anti-Discrimination Law:**

- Resulting from the executive orders, the Federal Government is seeking to ensure that employers comply with anti-discrimination law. Eightfold's AI platform, by focusing on skills and merit-based qualifications, facilitates companies and the US government to ensure compliance with federal anti-discrimination. In fact, as mentioned above, the platform, under UGSP, helps ensure any decisions made in hiring come down to qualifications and skills - and nothing else.

Please refer to the whitepaper for details on Employee Retention for details: <https://eightfold.ai/wp-content/uploads/unlocking-retention-eightfold-match-score-enhances-talent-acquisition-reduces-turnover.pdf>

- **Advancing AI Adoption in Workforce Automation**

- Eightfold's **Agentic AI** revolutionizes talent acquisition by going beyond basic automation to empower your workforce. It automates key workflows, enabling individuals to take meaningful actions that enhance productivity and streamline effective decision-making. This approach not only reduces redundant work but also allows teams to focus on high-value tasks, fostering **skill development** and **upskilling through AI tools** and technologies.
- Agentic AI's ability to adapt to your team offers generative insights and assistance while transforming complex processes. From **fast-tracking hiring to automating candidate screening and onboarding**, it makes the recruitment process faster and more efficient. By empowering individuals to embrace AI, Eightfold ensures the American workforce can adapt and thrive, maintaining leadership in AI innovation. Through smarter, AI-driven workflows, your team is

positioned to build a future-ready workforce, advancing both business success and technological leadership.

Please refer to the link below for details on our Agentic AI offering: <https://eightfold.ai/use-cases/eightfold-agentic-ai/>

- **AI Talent for National Security and Defense**

- Eightfold AI's Talent Intelligence Platform has been successfully deployed to support national security efforts and has provided robust talent solutions for the **Department of Defense** and **major enterprises** within the United States and globally. The platform utilizes advanced AI to identify and develop critical skills, making it a valuable tool in enhancing national security by ensuring that key positions are filled by highly capable individuals.
- For a workforce prepared for AI advancements, the government should use AI-driven workforce intelligence to not only identify and **retain top talent** but also to **effectively redeploy** personnel as needed. This includes leveraging comprehensive data on skills and experiences to ensure that the right individuals are placed in roles where they can contribute most effectively, aiding in the overall readiness and adaptability of the defense workforce.

- Eightfold AI's technology is designed to enhance workforce readiness by identifying potential skill gaps and providing solutions to address them through rapid retraining programs. This proactive approach ensures that personnel can be quickly reskilled to meet evolving defense needs. Additionally, the platform aligns workforce planning with national defense objectives, helping to ensure

that the defense **workforce remains agile** and capable of meeting current and future challenges.

Please refer to the Defense Innovation Unit case study for details:

https://eightfold.ai/wp-content/uploads/defense_innovation_unit_diucustomer_story.pdf.

- **Regulatory Compliance and Responsible AI**

- Eightfold AI upholds transparency and explainability by providing recruiter users and hiring managers with detailed explanations of match scores and breakdowns on how well a candidate profile aligns with job requirements. The company's proactive approach to compliance is demonstrated through its alignment with international and local privacy regulations, such as the **EU General Data Protection Regulation (GDPR)**, **New York City Bias Audit**, **California Consumer Privacy Act (CCPA)**, and more.
- Eightfold AI integrates with existing HR/IT systems and leverages enterprise talent data through AI to derive insights while ensuring data privacy with encryption both at rest and in transit. The platform adheres to enterprise-grade security standards, including **ISO 27001, ISO 27701, and SOC 2 Type II certifications**. Regular testing and safeguards for the ethical use of AI are prioritized, including measures to ensure fairness, accuracy, and robustness.
- Eightfold AI is committed to ensuring responsible AI adoption by businesses and government agencies. Our solutions are designed to accelerate productivity through AI-driven enhancements while simultaneously preserving the relevancy of the workforce. This is achieved by combining AI-powered career pathing, personalized learning, and automation, which collectively support continuous upskilling and reskilling initiatives, ensuring that workers remain competitive in an evolving **AI-driven economy**.
- Eightfold AI emphasizes responsible AI use by continuously updating its models to resist adversarial threats and performing rigorous testing for accuracy and fairness. The company also ensures compliance with relevant legal and regulatory requirements, safeguarding ethical standards in AI deployment. By maintaining active compliance with applicable laws and monitoring emerging regulations, Eightfold AI supports innovation while upholding strict governance standards. Eightfold has achieved significant milestones in its journey towards obtaining **IL4** and **FedRAMP** readiness to meet compliance and security requirements, particularly for public sector clients.

Please refer to our Responsible AI whitepaper for details:

https://eightfold.ai/wp-content/uploads/Responsible_AI_at_Eightfold.pdf.

Conclusion

Eightfold AI believes that talent intelligence is the foundation of America's AI future. By integrating AI-powered workforce planning into the national AI policy, America can sustain its leadership in technology, national security, and economic competitiveness. Eightfold AI stands ready to collaborate with policymakers, leveraging their AI-driven talent solutions to support the development and maintenance of a skilled and adaptable workforce, prepared to meet the challenges and opportunities presented by advancements in artificial intelligence. Eightfold can help:

- Prioritize AI-driven workforce development
- Support merit-based hiring through AI, particularly regarding Executive Order 14170
- Invest in agentic AI for workforce productivity
- Enhance AI talent pipelines for national security
- Ensure Responsible AI innovation

This approach will ensure that AI not only transforms industries but also empowers the American workforce for generations to come.

Thank you for considering our input.

V/r,

Michael Perlstein

Federal AI Workforce Solutions Lead
Eightfold AI

About Eightfold

[Eightfold AI Inc.](#) was founded in 2016 by visionary leaders Ashutosh Garg and Varun Kacholia with a mission to revolutionize the HR industry through the power of talent intelligence. Our founding team brings a wealth of AI and machine learning expertise from extensive experiences at technology giants including Google, IBM, YouTube, and Facebook. Applying our AI backgrounds to the HR space, we are reinventing how organizations find and develop best-fit talent while driving innovation at the intersection of talent acquisition, management, and career development.

In 2021, the **US State Department recognized Ashutosh Garg** as one of the ten immigrant founders who have created two unicorn organizations. This honor reflects his extraordinary contributions to the technology industry and his significant impact on the global workforce. Ashutosh Garg has been instrumental in revolutionizing workforce transformation through AI-powered talent intelligence, aligning the right talent to the right opportunities, and fostering an inclusive and future-ready workforce.

We have raised over \$410 million from investors like Softbank and General Catalyst Partners, and our technology has earned **5 US patents**. This substantial investment is a testimony to the pioneering solutions and tangible results that we've already delivered to our broad range of enterprise clients.

- **Anonymizing**
 - [US Patent #11,030,583: Anonymizing talent profiles to prevent bias](#)
 - [US Patent # 11,176,271: Enabling a candidate to apply anonymously for a job](#)
- **Predicting:**
 - [US Patent # 10,803,421: Predicting candidates most likely to succeed in a job](#)
- **Infrastructure:**
 - [US Patent # 11,836,153: Bidirectional high-volume data synchronization between intelligent platform and remote system with minimal latency](#)

With AI-powered insights on skills, we help our customers transform their workforce to achieve overall business goals. At the core of our offerings is the Talent Intelligence Platform™, a cutting-edge solution that utilizes native AI to empower enterprises to attract, engage, and retain a skills-based talent pool. By harnessing the power of AI-driven insights and analytics, we enable our customers to make informed decisions and build high-performing teams that drive sustainable growth.

Dedicated to promoting equal opportunities for all, we offer a more inclusive way to hire best-fit talent rather than depending on traditional résumés as the primary potential determinant. We champion an inclusive, talent-centric approach, valuing people based on their skills and potential. Hiring new talent is only part of every organization's talent strategy. Our platform also empowers our customers to optimally manage talent, including reskilling and upskilling existing employees and promoting internal talent to new opportunities. This is a genuine competitive advantage, as our customer needs to keep top talent to reach and exceed their business goals.

Our commitment to revolutionizing the talent space extends beyond organizational boundaries. We envision a world where everyone is empowered to find the right career path. By providing people with opportunities that align with their true potential, we are at the frontier of a culture that fosters a future where talent flourishes and careers thrive.

Please refer to the whitepaper to learn more about the Talent Intelligence Platform: <https://joshbersin.com/understanding-talent-intelligence-a-primer/>.

Our Product Portfolio

Eightfold Talent Intelligence is the only purpose-built AI talent suite that empowers business leaders to plan and execute data-driven talent strategies that result in strategic business outcomes. The Eightfold Talent Intelligence Platform provides a single source of talent intelligence that synthesizes enterprise talent networks, public market information, and more than 1.5 billion talent profiles to understand each person's career and potential.

Eightfold Talent Intelligence Platform (TIP) is a comprehensive platform with end-to-end application products available for Talent Acquisition (candidates), Talent Management (employees), Resource Management (client consultancy resource management), Talent Design & Planning, and Public Sector Product Workforce Exchange (citizens). Such a broad scope and AI personalized recommendation at scale on one platform requires the capability, speed, and flexibility that can only come from deep learning AI designed and built by our world experts in this technology. All our application products are built on our patented Talent Intelligence Platform, emphasizing ethical AI development focusing on fairness, transparency, and active monitoring to mitigate biases.

Eightfold Talent Intelligence Platform is the foundational layer of Eightfold applications that integrates with existing HR/IT systems (HRIS, ATS, LMS, VMS, Email, SSO, and others) and leverages the enterprise talent data and outcomes through artificial intelligence to derive insights and inform workflows across the talent lifecycle management. The Eightfold platform establishes an unprecedented understanding of skills needed, skills availability, roles, candidate and employee experience, and career trajectories radically increasing the effectiveness of talent solutions.

Customer Base

Eightfold is the recognized leader in applying Artificial Intelligence to solve diverse employment challenges. The proprietary and patented AI algorithms are used today by some of the world's largest organizations to solve employment outcomes at scale—with proven results.

Our customer base encompasses 150+ global enterprises across diverse industries, including Public Sector, Technology, Financial Services, Pharmaceutical & Life Sciences, Healthcare/Food, Media, Manufacturing, Energy, Transport, Travel, Public Sector, and Retail. This impressive roster includes Fortune 100 and over 40 Fortune 500 companies. Notable publicly disclosed customers include Bayer, Capital One, BNY Mellon, Mercado Libre, Dexcom, Dolby, Akamai, Vodafone, LG, Defense Innovation Unit, etc. For more information and customer testimonials, please visit <https://eightfold.ai/customers>

Our customers have achieved significant outcomes using the Talent Intelligence Platform, which we proudly showcase through case studies on our website, analyst reports, webinars, and other formats. These success stories demonstrate measurable results in key metrics such as Time to Hire, Quality of Hire/Conversion Ratio, Diversity, Cost Reduction, Efficiency, Candidate Experience, Employee Skill-based Career Development, and Talent Redeployment. To access detailed case studies, please visit <https://eightfold.ai/customers/customer-stories/>.

What Makes Us Different

In an era of rapid technological advancement and evolving workforce demands, public sector agencies must adopt innovative solutions to address workforce development challenges. Eightfold's Talent Intelligence Platform™ offers a comprehensive, data-driven approach that can help public sector agencies streamline recruitment, enhance diversity, and build long-term workforce resilience. Here are several compelling reasons why Eightfold:

- **Enhanced Workforce Development:** Eightfold's AI-powered Talent Intelligence Platform™ revolutionizes workforce development by leveraging cutting-edge technology to improve recruitment efficiencies. With real-time insights, public sector agencies can foster long-term workforce resilience and adapt to future employment challenges. The platform ensures that government agencies can continually evolve their workforce strategies and stay ahead of changing demands.
- **Skills-based Hiring:** A key feature of Eightfold's platform is its support for skills-based hiring, moving away from traditional degree requirements. This approach mitigates hiring biases and creates more opportunities for diverse talent pools, aligning with public sector agencies' goals to embrace inclusive hiring practices. By focusing on skills rather than credentials, public agencies can build a more equitable workforce that reflects the communities they serve.
- **Data-driven Insights for Strategic Workforce Planning:** Eightfold provides real-time, actionable insights that empower public sector agencies to align their workforce strategies with organizational goals. This data-driven approach allows agencies to proactively identify skill gaps, monitor industry trends, and make informed decisions about talent acquisition and development. With Eightfold, agencies can ensure their workforce is equipped for both current and future challenges.
- **Proven Success in the Public Sector:** Eightfold has an established track record of success with various public sector customers, including the State of Indiana Department of Workforce Development, the State of New York Department of Labor, and the U.S. Department of Defense's Defense Innovation Unit. These successful partnerships showcase Eightfold's ability to deliver results in government settings, assuring that your agency will benefit from tried-and-tested solutions.
- **Comprehensive Support and Resources:** Eightfold offers extensive resources and dedicated support to public sector customers. This includes tailored webinars, thought leadership content, and customer-facing materials that specifically address the unique challenges faced by federal, state, and local government agencies. With Eightfold, public sector organizations receive the guidance and expertise needed to implement and maximize the platform's capabilities.
