Eric Shanower

To all lawmakers and law enforcement officers of the federal government of the United States of America, I am interested in the development of Generative Artificial Intelligence. I want to make sure that lawmakers and law enforcement understand that Generative AI should not be trained using unlicensed intellectual property that is not in the public domain. Unrestricted use of intellectual property will hurt creators of intellectual property, both economically and motivationally, weakening the foundations of intellectual property in the USA and having a chilling effect on the creation of intellectual property by US citizens. This will result in economic weakening of the USA. Any use of copyrighted intellectual property by Generative AI needs to be licensed from the IP's creators. I also want to make sure that lawmakers and law enforcement understands that under US law, US copyright is limited to works of human creation. Works generated by Generative AI are not eligible for copyright. Any change to US law to grant any sort of copyright to works generated by Generative AI will help to weaken US economy and have a chilling effect on the creation of intellectual property by US citizens. Sincerely, Eric Shanower
