RE: AI Action Plan

Ryan Carrier, Executive Director

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

## Introduction and Background

ForHumanity (<https://forhumanity.center/>) is a 501(c)(3) non profit organization and ForHumanity Europe is a French 1901 Association, dedicated to addressing risks associated with Ethics, Bias, Privacy, Trust, and Cybersecurity in Artificial Intelligence, Algorithmic, and Autonomous (AAA) Systems. ForHumanity uses an open and transparent process that draws from a pool of over 2,600+ international contributors to construct audit criteria, certification schemes, and educational programs for legal and compliance professionals, educators, auditors, designers, developers, and legislators to mitigate bias, enhance ethics, protect privacy, build trust, improve cybersecurity, and drive accountability & transparency in AAA Systems. ForHumanity has created more than 50 certification schemes with more than 7,000 distinct risk controls, treatments, and mitigations to operationalize the EU AI Act; GDPR; California Privacy; Unfair, Deceptive, and Abusive Practices (FTC Act); and many others. ForHumanity works to make AAA Systems safe for all people and makes itself available to support government agencies and instrumentalities to manage risks associated with AAA Systems. Our mission is to *examine and analyze downside risks associated with the ubiquitous advance of AI, algorithmic, and autonomous systems, and where possible, to engage in risk mitigation to maximize the benefits of these systems... ForHumanity.*

ForHumanity is under contract to advise the US AI Safety Institute and CEN/CENELEC JTC 21 (the European standards body tasked with establishing the EU AI Act conformity assessment). ForHumanity works with, interacts with, and advises the European Commission, Data Protection Board, Information Commissioner's Office, UK Accreditation Service, US Department of Labor and Defense, the Federal Reserve, and Congress.

ForHumanity makes the following recommendations:

### **Defending National Security**

Artificial Intelligence is a powerful tool, and when combined with the internet and social media, there is a low barrier to entry for enemies of the state to engage in nefarious, fraudulent, and malfeasant activities. Examples of the usage of AI against the interest of the state include the creation of deepfakes and disinformation.

Our democracy is reliant upon trustworthy information and the freedom of expression. Innovation is accelerated when information is readily converted into knowledge and wisdom, whether by research or the processing of information by Artificial Intelligence. An ocean of information that is roiled by deepfakes and disinformation, with questionable authenticity, authority, provenance, and reliability, greatly hinders innovation.

ForHumanity advocates for robust provenance procedures for content that upholds intellectual property rights and ensures transparency of ownership, content generation, and obvious declarations of purpose. We advise that this is done with legislative requirements regarding technical metadata, procedures for supporting trustworthiness of content (validation services), and indelible watermarking.

### **General AI Literacy/Fluency fostering American AI Leadership**

Like most technology, AI can be used for good or nefarious purposes, such as manipulation or fraud. Such nefarious purposes can be undermined by training and educating consumers of content on how to identify and avoid manipulation and fraud. Furthermore, training and educating the population on the design, development, and deployment of AI increases the opportunities for good uses. ForHumanity has built guidance and learning objectives for all government and corporate AI Literacy deployments of AI. Additionally, we are embarking on a fulfillment of our own mission by providing generic AI Literacy training for mass

audiences. The US Federal Government is welcome to use any or all of these resources.

### **Innovation and Safety Are Not Incompatible Concepts**

Some of the greatest innovations have been safety features (e.g., seatbelts, airbags). ForHumanity encourages the development and maturity of AI that includes advancing capabilities while decreasing harms and negative impacts to direct and indirect stakeholders. “More Compute” is not always the answer, most recently demonstrated by DeepSeek.

### **Artificial Intelligence has been deployed in ways that directly result in harm to Consumers/Individuals, hindering adoption and deployment**

Existing laws, such as the FTC Act, should be enforced robustly to counter rampant AI abuses such as:

1. False, misleading, and exaggerated promotions
2. Hiding or obscuring consumer rights
3. Bait and Switch AI
4. False advertising and misleading design (UX/UI) that takes advantage of consumers, especially Vulnerable Populations (Elderly, Children, Veterans)
5. The advancement of discriminatory outcomes
6. Garbage in (poor data management and governance) = Garbage Out (harmful outcomes)
7. Empowering consumer choice (e.g., parental choice), such as content moderation

### **Building an Infrastructure of Trust for Global AI Leadership**

ForHumanity recommends market-based enforcement of laws, regulations, and guidelines through third-party independent audits (replicating the financial audit model for 10Q's and 10K's). Please refer to the NTIA's report on Algorithm Accountability published [here](#) for detailed recommendations on Independent Audit of AI Systems. ForHumanity provides all of its support and resources under the authority of the Federal Government as applicable.

ForHumanity stands ready to support this infrastructure of trust with our globally harmonized certification schemes and training for organizations seeking to implement robust and auditable risk controls, treatments, and mitigations. The

US's global leadership in finance can be directly attributed to the financial audit and reporting requirements established by the SEC in the mid 1970's. We advise a similar infrastructure of trust for AI, Algorithmic, and Autonomous Systems and are positioned to uniformly support this ecosystem institutionally and individually.

A second order benefit from Independent Audit of AI Systems is robust validation and independent certification of AI. Third-party assurance of compliance with laws, regulations, standards, and best practices leads to increased usage and deployment by facilitating adoption of Artificial Intelligence by government at all levels and the private sector.
