i have serious concerns that AI will be abused, and I think these questions should be asked. Who has control of AI? governments cant be trusted, large corporations, and anyone political also cant be trusted. power inherently corrupts. Does privacy even exist? How much more privacy are we willing to give up since 09-01-01? Can and will this AI be weaponised, against individuals, political rivals, other governments? Is this for betterment of mankind or another way to control people?
