

“This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.”

This comment is written by Daverede Heim.

AI models should only be trained on content explicitly released for that purpose by it's creators. We have copyrights, trademarks and licenses. All of these serve to protect the labor and development of creative works, research, patents and such. These protections enable people to invest their time, energy and expertise. We have understood the importance of IP for ages. It's shouldn't be thrown away simply because a new technology would be more fruitful if it stole the IP of creators and researchers that never consented to this use.

AI training, as it currently exists, is based on shameless appropriation of others' intellectual property. This is already having a chilling effect on those whose work has been stolen for AI training. The government must create guardrails for AI technology to curb it's voracious appetite to steal others' work without shame or consequence.

Initially copyright compliant training sets could be formed from works in the public domain. Works protected by current copyright law could be opted in by their creators, with verification that works are not submitted without the true author's authorization.

Opting out is not viable as it creates a whack-a-mole situation where limitless theft is allowed until it is caught.
