

**Subject:** Public Comment on the Development of an Artificial Intelligence (AI) Action Plan

**To Whom It May Concern,**

On behalf of the **Health AI Institute**, we appreciate the opportunity to provide input on the development of a national **Artificial Intelligence (AI) Action Plan**. As a leader in AI-driven healthcare innovation, research, and implementation, we support a strategic and responsible approach to AI governance that maximizes benefits while safeguarding patient safety, equity, and transparency.

## **1. Prioritizing AI Governance and Risk Management**

We recommend the AI Action Plan emphasize **robust governance frameworks** that align with the principles of **transparency, accountability, and fairness** in healthcare AI deployment. Specifically, we urge the federal government to:

- Establish **clear regulatory guidelines** on AI validation and performance monitoring in clinical settings.
- Promote **standardized AI risk assessment frameworks**, including bias detection, explainability, and ethical considerations.
- Require **human oversight mechanisms** in AI-assisted decision-making to prevent overreliance on automated outputs.

## **2. Strengthening AI in Healthcare through Interoperability and Data Standards**

To accelerate AI innovation and adoption in healthcare, the **AI Action Plan** must address barriers related to **data interoperability and access** while maintaining stringent data privacy protections. We encourage:

- Development of **federated learning models** that allow AI training across institutions while preserving data privacy.
- National **data sharing standards** to enhance AI model generalizability while ensuring security and compliance with HIPAA.
- Collaboration with **health IT vendors and EHR systems** to integrate AI solutions that enhance clinical workflow efficiency.
- Support for **community engagement initiatives** that involve diverse stakeholders in AI system design and evaluation.

## **3. Ensuring AI Transparency and Public Trust**

Public trust in AI-driven healthcare depends on **transparency in AI development and deployment**. We urge federal agencies to:

- Require AI developers to disclose **model limitations, validation data sources, and explainability metrics**.

- Establish **public AI registries** for high-risk AI applications in healthcare to ensure accountability.
- Mandate **rigorous post-market surveillance** of AI tools used in medical decision-making.

#### 4. AI Workforce Development and Ethical AI Education

A comprehensive AI Action Plan should include **workforce training initiatives** to equip healthcare professionals with AI literacy and implementation skills. We recommend:

- Federal grants to support **AI training programs for clinicians, data scientists, and health IT professionals and AI think tanks**.
- Ethical AI education programs integrated into **medical and informatics training curricula**.
- Development of **interdisciplinary AI ethics boards** to oversee responsible AI deployment in healthcare.

#### Conclusion

The **Health AI Institute** supports a **balanced approach** to AI regulation and innovation that prioritizes **patient safety, equity, and transparency** while fostering **technological advancement**. We welcome continued engagement with federal agencies to shape a forward-looking AI strategy that aligns with the needs of healthcare providers, researchers, and patients.

We appreciate your consideration of these recommendations and look forward to further collaboration.

**Sincerely,**
