Dear Faisal, OSTP and NITRD NCO Team,

On behalf of IsAdvice & Consulting LLC, I express my gratitude for the opportunity to contribute to the AI Action Plan in support of Executive Order 14179 (Removing Barriers to American leadership in Artificial Intelligence). As a former Senior Executive Service member in the U.S. government, an AI engineering, governance, and cybersecurity leader, and the CEO of a small business specializing in enterprise IT modernization with AI innovation that drives mission impact, I strongly support a strategic approach to an AI action plan that fuses data management and cybersecurity. A summary of our recommendations follows, and we are extending an offer to elaborate in more depth:

1. Lightweight Governance and Breaking Down Agency Silos
 - a. Develop a federated AI and Data Strategy with an empowering governance framework to enhance cross-agency collaboration, knowledge reuse and efficiency, and idea exploration, fueling the mission to keep the US leading in AI innovations.
 - b. Create more pathways to product commercialization.
2. AI Security for National Security

- a. AI security must be a central pillar of the AI Action Plan to mitigate adversarial threats such as, but not limited to, data poisoning, AI model manipulation, and unauthorized deepfake utilization.
 - b. Develop AI security & cybersecurity professional development and training for government personnel that encompasses AI red teaming, blockchain, crypto 101, and Independent Test & Evaluation.
 - c. Enhance AI Threat intelligence and public-private collaboration, sharing across agencies so that all take part in defending and protecting U.S. national security.
3. Enterprise AI Innovation for long-term Modernization & Impact
 - a. Shift to enterprise-wide AI modernization programs with shorter term AI pilots leveraged as means to an end.
 - b. Embrace and publish operationalization playbooks, outlining best practices for AI deployment, monitoring and techniques to ensure that investments translation into accurate, real mission impact.
4. Leverage small businesses and their expertise. The entrepreneurial spirit of small businesses with AI/ML program leadership, AI/cybersecurity and the willingness to drive IT modernization will accelerate innovation, and the deployment of AI-powered solutions that are agile, cost-effective and matter to citizens and the US Government. Establish creative mechanisms for small businesses to thrive and maximize government contributions.

Final Thoughts

A federated research program, a lightweight and empowering governance strategy, security-focused AI innovations, and cross-agency IT modernization programs are key to maintaining America's leadership in AI and emerging technology. We are looking forward to the outcomes of this RFI and we are excited and hopeful to engage in next steps.

Thank you,

Pamela K. Isom
