Subject: [External] AI Action Plan: The Circular Theory AIM Architecture
Date: Friday, February 7, 2025 7:48:12 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

My idea is documented in a letter I sent on January 6 to Susan Wiles, Chief of Staff. Please retrieve that letter if you have a serious interest in my suggestion.

The Internet was originally a government INTRANET (DARPA). My first suggestion is that we have a private intranet in the US similar to DARPA as an experiment to test The Circular Theory (**a new unified architecture for the ATOM and therefore a better architecture for technology (Semi-Conductor) (CPU GPU UPU)**) in general.

Today, Technology is based on the relationship between a zero and a one without an adequate (or complete) understanding of the atom.

My architecture is called Autonomous Intentional Masking (AIM) and you can find out about it here:

The Circular Theory

Conservation of the Circle is the core (and, thus, the only) dynamic in Nature

circular-theory.squarespace.com

My suggestion is, 1) you assign someone to this project, 2) you get ahold of my letter to Susan Wiles and keep it confidential, 3) you bring me on board for a 3 month contract (or longer) and we **put together a team to explore the AIM architecture** which would give the US a lead globally technologically, since, technically, everything in technology is already using my architecture (but not to its maximum advantage).

Also read my full bio (the short version and then attached to the longer version) here **circular-theory.squarespace.com/ilexayardley**. [Ilexa Yardley — The Circular Theory](#)

[AIM — The Circular Theory](https://circular-theory.squarespace.com/AIM) <https://circular-theory.squarespace.com/AIM>

This architecture is faster than Google's fastest quantum chip WILLOW and also faster than AMD-powered El Capitan which is currently the fastest supercomputer (that we know about).

Also, as a side note, we should NOT be using OPEN architecture (as ub Deepseek for this new phase of nuclear computing.

Nor should we ever assume the fastest computer chip is for sale publically.
