Good morning,

My name is Jacqueline Spence, I'm a citizen of the United States of America, born and raised in New Jersey, currently living in San Antonio, Texas.

I have grave concerns with the proposed Artificial Intelligence Action Plan, specifically with how it threatens the livelihood of the American people and threatens the standard of American excellence that President Trump reportedly wants to bolster.

1. The Deterioration of the American Job Market

Though companies may claim that AI investments are made to improve efficiency, in reality the majority of AI investment decisions at major companies were made to replace human workers. Meta, Google, and other major tech companies have laid off large amounts of human workers in favor of "streamlined" AI processes, and if we look beyond the tech sector, AI is threatening to replace or has already replaced millions of American workers.

For example:

- With the rise of AI transcription softwares such as Gong and Otter.ai, job opportunities for human notetakers, administrative assistants, secretaries, etc. are near non-existent.
- With the rise in AI and Self-Service order takers at restaurants and retail, job opportunities for service works are decreasing year over year.
- For higher-level jobs, such as sales team members, companies like Artisan AI offer AI BDRs, threatening to eliminate the title totally in just a few years.

With the cost of Higher Education on the rise, and minimum wage positions being eliminated slowly but surely, I ask you what jobs will be left for the American people impacted by the rise of AI, as not everyone can be a mechanic, a hair-dresser, a carpenter... and who's to say an enterprising tech executive isn't already looking to "improve the efficiency" of those positions too?

2. Lack of Transparency, Security, and Exclusivity of Data Shared with AI Engines for Corporations

With the rise of AI technologies being offered to help streamline a corporation's business, so long as you allow them access to the right data, what laws are there to prevent these companies from analyzing a corporation's CRM system, Accounting System, and other various databases and using that data to create their own solution, or worse, use one corporation's data to improve their competitor's strategy?

For example:

- ZoomInfo, one of the largest sales enablement tools, is now offering their AI functionality CoPilot. At its most effective, ZoomInfo's CoPilot needs total access to a company's CRM system in order for its AI to provide guidance and form strategies for a sales person's outreach. That means: reading support tickets, reading customer emails, reading CSM notes, any and all of the final details that makes up a corporation's sales strategy and so much more.
- There is nothing save for a "don't use our data for this" email, lengthy and expensive contract negotiation processes, and having to invest in a high level data security team to constantly monitor the data ZoomInfo is accessing to ensure that ZoomInfo is not using this data to train their AI or are using this data to help competitors find ways to take down the competition.

If the AI Action Plan is to go through, rigorous regulations must be deployed at the federal level to protect corporations.

3. Downgrade in Quality of American Entertainment Leading to an Increase in Foreign Entertainment Markets

For hundreds of years American Entertainment has been the pinnacle of cultural media. However, since the rise of AI and chase of profits over product by large entertainment companies, America's spot at the top of the entertainment food chain is threatened. American Entertainment companies, rather than investing in great, human, American creators, would rather use AI for scriptwriting, animation, acting even, and when unsurprisingly the AI media created is not well recieved by their audience or subscriber base, they turn not to American creators, but Foreign Markets for "better" media.

Turn on any major streaming service or even tradtional television, and you'll see that the top shows are no longer American-made, but come from South Korea, Mexico, Canada, and the United Kingdom where AI has very little to do with entertainment and instead shows are made by human creatives.

In conclusion, while AI can have it's benefits, with what have seen from the corporations totting it, in its current state AI is not being used to bolster American Progress but is instead threatening it. If the goal is to make American great, launching this plan without regulations and due diligence will turn our country into a destitute laughing stock.

Best,

Jacqueline Spence
