The terms of this comment are very simple, opening policy of AI to strictly capital innovation is dangerous, one of the gravest national security risks and economic tar pit for anyone that relies on copyright to maintain the value of their original asset. Terminating regulations that would risk copyright protections of individuals and control over derivations of their work without a legal budget to maintain it would ruin entire creative and highly innovative research sectors. the majority of learned individuals on the topic of AI are very vocal about these issues, i do not need to regurgitate positions against, as council should understand they must take popular opposition in good faith, and include the compendium of remarks that exist in the corpus of discourse. Should power be granted to private interests to freely reign over the deployment of AI with infrastructural demands that far exceed the capacity and will of the common citizen, there will be dire economic consequences. This deployment should not be rushed, and like most technology, it should be adopted in consistent and intentional staged ways, to reduce risk and ensure equity to access, not in the interest of stakeholders who stand to profit from cartel like behavior in technology. Thank you for considering this comment when discussing the issue of an AI action plan.

Jeremy
