To Whom It May Concern,

I am writing to express my deep concerns about the trajectory of AI development, particularly as it relates to content creators, independent publishers, and the open web. As a blogger and publisher, I have firsthand experience seeing how AI without regulation is rapidly destroying the publishing industry—our work is being used to train AI models without consent, credit, or compensation, and as a result, many of us are seeing our income vanish.

If AI continues on this path, publishers will stop publishing. Why? Because content creators cannot sustain their work if their labor is exploited without fair compensation. And without original, human-created content, AI itself has no future. Generative AI models rely on human knowledge and creativity to function—yet the same companies building these models are refusing to reinvest in the ecosystem they depend on.

AI has its uses, but it cannot replace the firsthand experience, insight, and expertise that human publishers provide. We travel, research, test products, interview experts, and share lived experiences that help people make informed decisions. AI simply aggregates and repackages what already exists—it does not create. Without strong copyright protections, the incentives for original content creation will disappear.

Google and OpenAI have made minimal efforts to support the human creators whose work powers their AI models. The few licensing agreements they've established have primarily benefited large corporate media, leaving independent publishers, bloggers, and small businesses in the dust.

If AI companies are serious about building a sustainable future, they need to invest in the very ecosystem they depend on—rather than exploiting human-created content without compensation. The reality is that Google and OpenAI could choose to invest in content creators at the same scale as they invest in compute power—but they don't. And unless clear regulations are put in place, they will continue extracting value from the open web without giving anything back.

I urge this administration to:

- Enforce copyright protections so that AI models cannot train on human-created content without permission and fair compensation.

- Require AI companies to establish licensing frameworks for all creators, not just corporate media.
- Mandate transparency in how AI models are trained, ensuring publishers can control how their work is used.
- Support the open web by preventing monopolistic AI-driven suppression of independent publishers.

I stand for copyright, the open web, and the creators who fuel it. If AI is going to define the future, it must do so in a way that values and fairly compensates the people behind the content it relies on.

Thank you for your time and consideration.

Sincerely,

Jessica Festa
