Allowing Generative AI companies free access to copyrighted works not only puts thousands of business at risk and millions of citizens at risk, the unrestricted use of generative AI from companies such as Open AI has allowed an incredibly dangerous and exceedingly harmful flood of misinformation, disinformation, online scamming through visual and voice deep fakes. Thousands of freelance workers as well as thousands of businesses rely on proper copyright laws in order to safely work and allow proper economic business flow with millions of dollars being kept safely flowing through all business sectors while proper safeties are kept on copyrighted works. Allowing privatized companies unrestricted access to copyrighted works would only further create damages to factual information and creative works in all sectors of business from independents and freelance workers to large corporations as every instance of generative AI use by companies and by private citizens has been met with intense backlash, criticism, and negativity resulting in loss of consumer base and lost revenue.

It has been reported and documented on several occasions in several business in which generative AI has been implemented, promising higher productivity and easier workflow, have caused an influx of incorrections, false information, and easily avoidable mistakes that normal human employees would avoid but then need to fix numerous times from the unreliability of generative AI's implementation in sectors of business where it should not belong, resulting in more hostile and stressful working conditions and costing businesses time and money on easily avoidable and needless corrections. Furthermore the unrestricted uses of generative AI from private citizens and companies alike has put heavier strains on power grids across the nation in which generative AI data centers operate through near constant activity, burning through more fuel resources and causing strain on power grids that put their functionality at risk during peak hours of use daily and in times of emergency needlessly put emergency services at risk.

To put it simply, the use of generative AI has been met with nothing but rejection and heavy criticism from the public and has caused an immense money sink in the technology sector that the generative AI companies are trying to displace through forceful integrations into other companies in nearly all levels of business that cause an exceeding strain on workers and damages to the companies that use generative AI, thus the notion that giving these generative AI companies less restrictions and free reign on copywritten work would cause significantly more harm across the nation. DO NOT ALLOW their failures and shortsighted business practices cause further harm to the American public or economy and DO NOT ALLOW generative AI companies unrestricted access to public copyrighted works.
